**Phase 1 Environmental Site Assessment
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 92648**

1.0 INTRODUCTION

Martin Cadillac has retained Western EHS Service, Inc. (Western) to conduct a Phase I Environmental Site Assessment (ESA) of the Martin Cadillac (site) located at 12101 West Olympic Blvd., in the city of Los Angeles, Los Angeles County, California. Approval was granted pursuant to the execution of a contract between Martin Cadillac and Western.

1.1 Purpose

The purpose of this assessment is to provide an independent, professional opinion regarding the recognized and apparent environmental conditions, if any, associated with past and present operations at the site. Western used the ASTM "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" as a guideline in the preparation of this ESA. According to ASTM, the term "recognized environmental condition" means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.

1.2 Involved Parties

The following people were interviewed to obtain information presented in this report:

Mr. Tom Tait, President, Martin Cadillac

1.3 Methodology and Scope

This Phase I Environmental Site Assessment was conducted in conformance with the terms specified in a contract signed between Martin Cadillac and Western.

Methodology: This assessment includes four components:

- A walk-through of the subject property;
- A review of pertinent state and federal records and databases to evaluate present and historical use of the subject and adjacent properties;
- Interview with local governmental officials and neighbors;
- Evaluation of information and preparation of this report.

**Phase 1 Environmental Site Assessment
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 92648**

Scope: The scope of this ESA is in accordance with the contract terms as follows:

Regulatory Review:

Discussion with local, state and federal agencies regarding hazardous material storage and releases from the site.

Historical Land Use:

A historical land use survey will be conducted for the site.

Site Inspection:

A facility walk-through with emphasis on the environmental condition of the property. Facility personnel will be interviewed and facility records will be reviewed.

Environmental Permits:

Permits related to environmental affairs will be reviewed. These permits include hazardous material disposal and storage.

Neighboring Facilities:

The neighboring facilities will be documented for their potential to impact the site.

Site Drawing:

A site drawing will be included in the report. Hazardous materials will be noted.

Polychlorinated biphenyl's (PCBs):

Local regulatory agency will be contacted regarding presence of PCBs on the property.

Storage Tanks:

Storage tanks shall be assessed regarding compliance with local, state, and federal regulations.

Report Submission:

The report will be submitted to:

Mr. Tom Tait
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 90025

**Phase 1 Environmental Site Assessment
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 92648**

2.0 GENERAL SITE CHARACTERISTICS

This section will describe the site as observed by Mr. Glenn Smith, Senior Environmental Engineer of Western. The site visit included property inspection and area reconnaissance of Martin Cadillac and neighboring properties.

2.1 Location

In general, the site is located on the north side of Olympic Blvd., in the City of Los Angeles, in the County of Los Angeles, California. (See Figure 2-1)

The site consists of a developed commercial/light industrial property which is currently being used as an automobile sales and service facility. (See Figure 2-3)

The surrounding land use is a mixture of light industrial and commercial occupancies.

2.2 Current Uses of Adjacent Property

North:

The property is bordered along the north by a commercial facility. (See Figure 2-2)

South:

The property is bordered along the south by Olympic Blvd; across Olympic Blvd is a commercial/light industrial facility. (See Figure 2-2)

East:

The property is bordered along the east by Bundy Drive and across Bundy Drive by a commercial/light industrial facility. (See Figure 2-2)

West:

The property is bordered along the west by a commercial/light industrial facility. (See Figure 2-2)

2.3 Site Description and Current Site Use

The Martin Cadillac site currently consists of approximately 30,000 square feet of property which includes an approximately 15,000 square foot facility and is currently used as automobile sales and service facility. (See Figure 2-3)

12101 West Olympic Blvd.
Los Angeles, CA 92648**

3.0 ENVIRONMENTAL SETTING

3.1 Regional Physiographic Conditions

The elevation of the site is approximately 156 feet above mean sea level. The general region and the immediate region around the site are gently sloping to the south.

3.2 Geologic Conditions

Geologic information regarding the site can be useful in determining the relative speed at which contamination may migrate in the region. The geologic code for this region is Q. The region is from the Cenozoic era, Quaternary system and Quaternary series.

3.3 Groundwater Conditions

Site-specific hydrogeologic information available for the area within the 1-mile radius of the facility indicates a direction of groundwater flow for the region is to the south/southwest.

4.0 RESULTS OF INVESTIGATION

The purpose of the site reconnaissance portion of the ESA is to evaluate the area for visual evidence of incidents that could or may cause an environmental impact to the property.

4.1 Site Inspection Observations

4.1.1 General Site Conditions

The site consists of one building (See Figure 2-3) that is currently being used for sales/administration offices, automotive service, automotive service/carwash, automotive parts sales/storage and auto body repair/painting.

All of the open areas of the facility are covered with asphalt pavement. The facility is secured with a perimeter chain link fences and concrete block walls and is accessed via gates in the chain link fences or concrete block walls.

The facility is currently used for an automobile sales and service facility. Mr. Tom Tait, President, Martin Cadillac advised Western that the site has been used as the existing automobile sales and service facility since its construction in 1975.

**Phase 1 Environmental Site Assessment
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 92648**

4.1.2 Facility Review

Building I

Sales/Administration Offices

The Sales/Administration Office areas of Building I (See Figure 2-3) is constructed utilizing standard concrete slab floors, steel/stucco exterior walls, and steel roof structure with an asphalt roof membrane. No hazardous materials were observed to be stored and used in this area. The facility in this area appeared to be in good condition with no visible signs of hazardous material spills or leaks.

Automotive Service

The automotive service area of Building I (See Figure 2-3) is constructed utilizing standard concrete slab floors, steel exterior walls, and steel roof structure with a steel roof membrane. Hazardous materials were observed to be stored and used in this area. The hazardous materials included various chemicals used during automotive service operations such as oxygen, acetylene, lubrication oils, antifreeze and parts cleaning solvents. The facility in this area appeared to be in good condition with no visible signs of hazardous material spills or leaks.

Automotive Service/Carwash

The automotive service/carwash of building I (See Figure 2-3) is constructed utilizing standard concrete slab floors, steel exterior walls, and steel roof structure with a steel roof membrane. Hazardous materials were observed to be stored and used in this area. The hazardous materials included various chemicals used during automotive service operations such as, and various carwash soaps. The facility in this area appeared to be in good condition with no visible signs of hazardous material spills or leaks.

Auto body Repair/Painting

The auto body repair/painting area of Building I (See Figure 2-3) is constructed utilizing standard concrete slab floors, steel exterior walls, and steel roof structure with a steel roof membrane. Hazardous materials were observed to be stored and used in this area. The hazardous materials included various chemicals used during body shop operations such as oxygen, acetylene, carbon dioxide, lubrication oils, antifreeze, parts cleaning solvents, paint, and solvents. The facility in this area appeared to be in good condition with no visible signs of hazardous material spills or leaks.

**Phase 1 Environmental Site Assessment
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 92648**

Automotive Parts Sales/Storage

The automotive parts sales/storage area of Building I (See Figure 2-3) is constructed utilizing standard concrete slab floors, steel exterior walls, and steel roof structure with a steel roof membrane. Hazardous materials were observed to be stored in this area. The hazardous materials included various chemicals used during automotive service operations such as, lubrication oils, antifreeze, parts cleaning solvents, paint, and solvents. The facility in this area appeared to be in good condition with no visible signs of hazardous material spills or leaks.

4.1.3 Underground Storage Tanks

During the facility walk-through, visible evidence of one underground storage tank was observed at the facility. Review of facilities records and a review of the Los Angeles City Fire Department, Underground Tank Division records revealed that the 10,000 gallon underground storage tank is of relatively recent construction (1996) and is in compliance with all applicable underground storage tank regulations.

Additionally, research with the Los Angeles City Fire Department, Underground Tank Division records revealed that the facility originally included five underground storage tanks when it was constructed in 1975 (two 500 gallon waste oil tanks, two 1000 gallon waste oil tanks and one 10,000 gallon gasoline tank). City records also revealed that all five underground tanks were properly removed in 1996 (tanks closure reports on file see appendix 8.4). City records also revealed that in 1996 the current underground storage tank was installed in compliance with all applicable underground storage tank regulations.

4.1.4 Hazardous Substances and Petroleum Products

The facility stores a number of hazardous materials in aboveground tanks. The containers appeared to be in good condition, with no visible signs of hazardous material spills or leaks. It was also observed that the facility has provided spill containment and overfill protection for all of the aboveground tanks.

The facility also stores various small containers of hazardous materials such as oil, grease, adhesives, soap and solvents in the service areas, detail areas, and parts storage area. The containers were generally less than one gallon in size and appeared to be in good condition, with no visible signs of hazardous material spills or leaks.

4.1.5 Wastewater Management

Martin Cadillac personnel informed Western that the storm water generated at the facility is discharged into storm drains located along Bundy Drive and Olympic Blvd. (See Figure 2-3).

**Phase 1 Environmental Site Assessment
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 92648**

Martin Cadillac personnel informed Western that wastewater generated from the facility is typically discharged to the clarifier which is located adjacent to the wash rack area (See Figure 2.3).

4.1.6 Solid Waste Management

Martin Cadillac personnel informed Western that solid wastes such as cardboard boxes, used metal parts from cars, etc. is properly disposed of via a commercial trash disposal company.

4.1.7 Unidentified Conditions

During the walk-through of the property, Western personnel observed no unidentified condition.

4.1.8 Electrical Equipment (Polychlorinated Biphenyls (PCBs))

Western observed that the only transformer on the site is owned and operated by the municipal power company. The municipal power company operates the transformer and they can conduct an analysis for PCBs in the transformer's dielectric oil at an extra charge. Western notes that the presence of PCBs in transformer oil, a known carcinogen, is minimal. The environmental impact from accidental spillage of transformer oil, hence, is considered very remote. The transformer appeared to be in good condition with no visible signs of hazardous material spills or leaks. Other electrical equipment on site is limited to heating, ventilation and air conditioning system, air compressor, and indoor/outdoor lights.

4.1.9 Hydraulic Equipment

During the site visit, it was observed that the dealership is currently operating forty seven automotive hoists. Four of the hoists are the traditional hydraulic type and forty three are aboveground hoists. The hoists appeared to be in good working order with no visible leaks. Facility managers advised Western that the hoists do not consume excessive amounts of hydraulic oil and are in good working order. Facility managers also advised that Pacific Lift and Equipment Company, Inc. perform periodic repair and maintenance of the hoist equipment. In summary the hoists at the dealership appear to be in good working order.

**Phase 1 Environmental Site Assessment
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 92648**

4.1.10 Exterior Observation

The site investigation performed by Western revealed no pits, ponds, or lagoons on the site. No stained soil or stressed vegetation was observed on site. In general, the property appeared to be in excellent condition.

4.2 Results of Regulatory Agency List Review and File Research

A review was performed by Western of reported environmental conditions within ASTM-recommended search distances of the site (Environmental Data Resources, Inc. report, Appendix 8.2). The report identified a number of facilities within the specified search radii from the site which are listed on governmental databases. A review of these facilities determined that none of the identified facilities present an environmental concern to the subject property due to their distance from the subject property, their down-gradient or cross-gradient position with respect to the site, and/or the nature of the environmental conditions at the facilities.

4.3 Adjacent Site and Vicinity Observations

The site is located on the north side of Olympic Blvd. in the City of Los Angeles, in the County of Los Angeles, California. (See Figure 2-2) The surrounding land use is a mixture of light industrial and commercial occupancies. (See Figure 2-2)

The site is bordered along the north by commercial facility (office building). Along the south it is bordered by Olympic Blvd. across Olympic Blvd there is a light industrial/commercial business. Along the west of the property is bordered by an industrial/commercial business. The property is bordered on the east by Bundy Drive; across Bundy drive there is an industrial/commercial business. (See Figure 2-2)

Environmental Data Resources, Inc. report, (Appendix 8.2) identified a number of facilities within the ASTM-recommended search distances from the site which are listed on governmental databases. A review of these facilities determined that none of the facilities present an environmental concern to the subject property due to their distance from the subject property, their down-gradient or cross-gradient position with respect to the site, and/or the nature of the environmental conditions at the facilities.

Based upon the information obtained through interview and observations, Western concludes that the risk of the site having received an environmental impact from the surrounding land use is minimal. A windshield tour conducted by Western, to review surrounding land use, corroborated the information provided by various individuals during interviews.

**Phase 1 Environmental Site Assessment
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 92648**

4.4 Results of Site History/Land Use Review

Based upon interviews with the facility managers and through reviews of city and county records and a review of available historical sources (see attached aerial photography Appendix 8.3) it was confirmed that the facility was developed into the existing automotive sales and service facility from a drive-in movie theater in 1975. The drive-in movie theater was developed from vacant property in the 1940's.

4.5 Results of Suspected Asbestos Containing Material Observation

A review was performed by Western of the potential of asbestos containing material being present at the site. The presence of asbestos-containing construction materials is a possibility due to the construction date of the facility in the 1970's. If materials are found to be asbestos containing, the building owner/operator must comply with applicable United States Environmental Protection Agency (USEPA), National Emissions Standards for Hazardous Air Pollutants (NESHAPS) and local regulations regarding its removal and/or management.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Western has performed a Phase I Environmental Site Assessment, in conformance with ASTM Standard Practices and the scope of work as described in the contract signed by Martin Cadillac and Western EHS Service, Inc., for the Martin Cadillac (site) located at 12101 West Olympic Blvd., in the city of Los Angeles, Los Angeles County, California. In the opinion of Western EHS Service, Inc., an appropriate level of inquiry has been made into the past and present uses of the property.

This Phase I Environmental Site Assessment revealed evidence of no recognized environmental concerns being present at the Martin Cadillac.

A summary of the environmental issues related to the property is as follows:

A review was performed by Western of reported environmental conditions within ASTM recommended search distances of the site (Environmental Data Resources, Inc. report, Appendix 8.2). The report identified a number of facilities within the specified search radii from the site. A review of these facilities determined that none of the listed facilities are expected to present an environmental concern to the subject property due to their distance from the subject property, their downgradient or crossgradient position with respect to the site, and/or the nature of the environmental conditions at the facilities.

A review was performed by Western of the historical use of the property. The review revealed that the property was undeveloped land until its development as the existing automobile sales and service facility. Reviews of city, county and available historical records confirmed this information.

**Phase 1 Environmental Site Assessment
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 92648**

A review was performed by Western of the surrounding land usage. Western determined that the likelihood of surrounding land use affecting the property is minimal.

A review was performed by Western of the underground storage tanks at the site. During the site visit, one 10,000 gallon unleaded gasoline underground storage tanks was observed. A review of city records revealed that the underground tank is in compliance with all applicable underground storage tank regulations. City records also revealed that five other underground storage tanks had been installed in 1975. City records also revealed that all five underground storage tank were properly removed in 1996 and the city of Los Angeles issued a site closure letter with regards to the underground tanks in May of 1996.

A review was performed by Western of the aboveground containers, which are being used to store hazardous materials at the site. These materials are typical of automobile sales and service operations and their storage appeared to be well managed.

A review was performed by Western of the forty seven automotive hoists. Four of the hoists are the traditional hydraulic type and forty three are aboveground hoists. The hoists appeared to be in good working order with no visible leaks. Facility managers advised Western that the hoists do not consume excessive amounts of hydraulic oil and are in good working order. Facility managers also advised that Pacific Lift and Equipment Company, Inc. performs periodic repair and maintenance of the hoist equipment and found the hoists at the dealership to be in good working order.

A review was performed by Western of the wastewater generated at the site. The site is graded in such away that storm water is discharged into storm drains. Additionally, wastewater generated during facility maintenance and automobile washing is discharged to the sanitary sewer system via a clarifier.

A review was performed by Western of the potential of asbestos containing material being present at the site. The presence of asbestos-containing construction materials is a possibility due to the construction date of the facility in the 1970's. If materials are found to be asbestos containing, the building owner/operator must comply with applicable United States Environmental Protection Agency (USEPA), National Emissions Standards for Hazardous Air Pollutants (NESHAPS) and local regulations regarding its removal and/or management.

6.0 LIMITATIONS AND EXCEPTIONS

Information required to complete the ESA was obtained from reviews of local, state, and federal records and through reviews of previously prepared Environmental Site Assessments

**Phase 1 Environmental Site Assessment
Martin Cadillac
12101 West Olympic Blvd.
Los Angeles, CA 92648**

The findings and recommendations of Western are based upon our understanding of the site conditions. Western is not responsible for the accuracy of information, conclusions, opinions, or recommendations made by other individuals or entities in connection with preparation of this ESA. For the purposes of this ESA, information, opinions or recommendations provided by the property owner and Environmental Data Resources, Inc. are considered accurate and complete.

The scope of work, as specified in the contract, did not incorporate any subsurface investigation. Consequently, the ESA should not be presumed to be a guarantee that environmental contamination is not present at the site. Of note, all Phase I environmental assessments of such type are limited in scope to information gathered from site evaluation and limited data gathering from regulatory agencies. Further, with the passage of time, environmental issues may arise that impair the value of the property. If any discrepancies or inaccuracies are observed in this report, our office should be contacted immediately.

The information and opinions rendered in this report are exclusively for the use by the Martin Cadillac. Western EHS Service, Inc. will not distribute or publish this report without the consent of Martin Cadillac, except as required by law or court order. The information and opinions expressed in this report are given in response to a limited assignment. The services provided by Western EHS Service, Inc. in completing this project have been provided in a manner consistent with normal standards of the profession. No other warranty, expressed or implied, is made.

Several non-scope considerations for the site include Asbestos Containing Materials, Radon, Lead-Based Paint and Lead in Drinking Water. Martin Cadillac may seek an independent opinion concerning these issues.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 04/23/2007 has revealed that there are 4 CERCLIS sites within approximately 0.5 miles of the target property.

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/21/2007 has revealed that there are 17 CERC-NFRAP sites within approximately 0.5 miles of the target property.

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/13/2006 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 09/10/2007 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
CENTINELA (SANTA MONICA) IDS (2-IDS 34TH AND PEARL ST	1/4 - 1/2 SSE	95	122

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, and dated 04/01/2001 has revealed that there are 10 Cortese sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

SWEEPS: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1980's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 14 SWEEPS UST sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/28/2007 has revealed that there are 7 ENVIROSTOR sites within approximately 1 mile of the target property.

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Comments: Identified the site through RP letter contacting DTSC in HQ FACILITY IDENTIFIED ID FROM ERRIS FACILITY IDENTIFIED ID FROM DRIVE-BYS IN VICINITY. FACILITY DRIVE-BY DRUMS IN YARD. IN A HEAVY INDUST AREA. A MESSY YARD. DTSC entered into a VCA to oversee a Site Characterization and a Removal Action Workplan if required. DTSC approved Soil Assessment Work plan to complete the site characterization. DTSC approved a Baseline Risk Assessment Workplan for implementation. Based upon DTSC's review of post remediation human health risk assessment, the Site does not appear to pose a threat to human health or the environment under any land use. Therefore, DTSC determines that No Further Action is necessary with respect to INSPECTION (LOCAL) CO SANIT. ANNUALLY REGULR INDUST INSP. SOURCE ACT: T/C W/ P. VICK, REX RECISION, (213)532-2060, 4/2/84 - PROD OF STEEL & ALUM CASTINGS FOR AIRCRAFT PARTS. YR OF OPER: 1978 TO PRESENT WASTE TYPE: SODIUM HYDROXIDE SLUDGE & CAUSTIC MATS Site screening completed. L.A county referred site to DTSC. Metcast operated the site from 1967 to 1978. Alco Standard corporation operated the site from 1978 to 1988. Metcast leased property for the manufacture of medical instruments. Process in The Department completed review of a Preliminary Endangerment Assessment (PEA). DTSC does not concur with the recommendation that no further action is needed at the site. DTSC recommends further characterization of the entire site. Included metal plating, including a foundry. Alco continued the same processes until 1988. Currently an auto body repair shop is on site. Sampling revealed high concentrations of chromium, lead nickel, and TCE in the soil. GW encountered at 38 feet. Investigation and remediation of hazardous substances at the Site. ERIALS. SUBMIT TO EPA PRELIM ASSESS DONE RCRA 3012 RP informed of the PEA process. Medium priority PEA required because of contaminated soil and potential GW contamination.

Other Pertinent Environmental Activity Identified at Site

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

FINDS:

Other Pertinent Environmental Activity Identified at Site

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

 Building I is used for metal fabrication, assembly, and jparts
 molding processes. Building II is used for packaging, ink
 formulation, and additional product assembly. Building II is used
 for warehousing and packaging and Building IV is used for storage of
 machine parts and furniture. The site is entirely covered by
 buildings or pavement and completely fenced. In 1985 in response to
 the City of Santa Monica's require- ments RP tested the pressure of
 18 USTs and excavated and removed VOC contaminated soil from the
 site. In Feb 1992 metal contaminated soil beneath the plating room
 floor of Building I was excavated and removed. In June 1993, six
 USTs were removed from the vicinity of Building I and soil
 contaminated with TPH was excavated and removed from the site. In
 August 1993 RP removed four USTs containing haz substances in the
 vicinity of Building II. Post removal soil samples indicated the
 presence of 1,2-dichloroethane 57 ug/kg, 1,1-dichloroethane 180 ug/kg,
 1,1,1-trichloro- ethane 450 ug/kg, tetrachloroethene 100 ug/kg,
 trichloro- ethene 30 ug/kg, and 1,1-dichloroethene 440 ug/kg. The
 City of Santa Monica is currently working with Papermate to implement
 a remediation technique for the VOC contamin- ated soil in the
 vicinity of Building II.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/09/2007	Source: EPA
Date Data Arrived at EDR: 09/05/2007	Telephone: N/A
Date Made Active in Reports: 10/11/2007	Last EDR Contact: 08/31/2007
Number of Days to Update: 36	Next Scheduled EDR Contact: 10/29/2007
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/27/2007	Source: EPA
Date Data Arrived at EDR: 08/29/2007	Telephone: N/A
Date Made Active in Reports: 10/11/2007	Last EDR Contact: 08/29/2007
Number of Days to Update: 43	Next Scheduled EDR Contact: 10/29/2007
	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/20/2007
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/19/2007
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/23/2007	Source: EPA
Date Data Arrived at EDR: 06/20/2007	Telephone: 703-412-9810
Date Made Active in Reports: 08/29/2007	Last EDR Contact: 09/19/2007
Number of Days to Update: 70	Next Scheduled EDR Contact: 12/17/2007
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 06/21/2007	Source: EPA
Date Data Arrived at EDR: 07/23/2007	Telephone: 703-412-9810
Date Made Active in Reports: 08/29/2007	Last EDR Contact: 09/17/2007
Number of Days to Update: 37	Next Scheduled EDR Contact: 12/17/2007
	Data Release Frequency: Quarterly

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 06/26/2007	Source: EPA
Date Data Arrived at EDR: 08/08/2007	Telephone: 800-424-9346
Date Made Active in Reports: 08/29/2007	Last EDR Contact: 09/04/2007
Number of Days to Update: 21	Next Scheduled EDR Contact: 12/03/2007
	Data Release Frequency: Quarterly

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/13/2006	Source: EPA
Date Data Arrived at EDR: 06/28/2006	Telephone: (415) 495-8895
Date Made Active in Reports: 08/23/2006	Last EDR Contact: 10/16/2007
Number of Days to Update: 56	Next Scheduled EDR Contact: 01/14/2008
	Data Release Frequency: Quarterly

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2006	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/24/2007	Telephone: 202-267-2180
Date Made Active in Reports: 03/12/2007	Last EDR Contact: 10/19/2007
Number of Days to Update: 47	Next Scheduled EDR Contact: 01/21/2008

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 07/16/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/03/2007	Telephone: 703-603-8905
Date Made Active in Reports: 10/11/2007	Last EDR Contact: 10/01/2007
Number of Days to Update: 69	Next Scheduled EDR Contact: 12/31/2007
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 07/16/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/03/2007	Telephone: 703-603-8905

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients--States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 06/20/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/09/2007	Telephone: 202-566-2777
Date Made Active in Reports: 08/29/2007	Last EDR Contact: 09/10/2007
Number of Days to Update: 51	Next Scheduled EDR Contact: 12/10/2007
	Data Release Frequency: Semi-Annually

CONSENT: Superfund (CERCLA) Consent Decrees

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: 04/13/2007	Source: Department of Justice, Consent Decree Library

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

DEBRIS REGION 9: Torres Martinez Reservation Illegal Dump Site Locations

A listing of illegal dump sites location on the Torres Martinez Indian Reservation located in eastern Riverside County and northern Imperial County, California.

Date of Government Version: 07/25/2007	Source: EPA, Region 9
Date Data Arrived at EDR: 07/31/2007	Telephone: 415-972-3336
Date Made Active in Reports: 10/11/2007	Last EDR Contact: 09/24/2007
Number of Days to Update: 72	Next Scheduled EDR Contact: 12/24/2007
	Data Release Frequency: Varies

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 07/02/2007	Source: Department of Toxic Substances Control

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

MARTIN CADILLAC
12101 WEST OLYMPIC BLVD.
LOS ANGELES, CA 90025

TARGET PROPERTY COORDINATES

Latitude (North):	34.03210 - 34° 1' 55.6"
Longitude (West):	118.4555 - 118° 27' 19.8"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	365629.8
UTM Y (Meters):	3766476.0
Elevation:	156 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	34118-A4 BEVERLY HILLS, CA
Most Recent Revision:	1999

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u>	FEMA Flood
LOS ANGELES, CA	<u>Electronic Data</u>
	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 0601370070C

0601370078C
0601370077C

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	NWI Electronic
BEVERLY HILLS	<u>Data Coverage</u>
	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Location Relative to TP:	1/8 - 1/4 Mile WSW
Site Name:	Mcdonnell-Douglas Aircraft Facility
Site EPA ID Number:	CA0000485326
Groundwater Flow Direction:	South-Southwest
Inferred Depth to Water:	50 feet.
Hydraulic Connection:	Information is not available regarding the hydraulic connection between aquifers underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Surficial Soil Types: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Shallow Soil Types: fine sandy loam
 gravelly - loam
 sand
 silty clay

Deeper Soil Types: stratified
 clay loam
 silty clay loam
 gravelly - sandy loam
 coarse sand
 sand
 weathered bedrock
 very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Water System Information:

Prime Station Code:	G19/146-VOAEFFL	User ID:	4TH
FRDS Number:	1910146022	County:	Los Angeles
District Number:	07	Station Type:	WELL/AMBNT/MUN/INTAKE
Water Type:	M	Well Status:	CR
Source Lat/Long:	340200.0 1182800.0	Precision:	1 Mile (One Minute)
Source Name:	ARCADIA TREATMENT PLANT - MIXED INFLUENT		

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS

System Number:	1910146		
System Name:	SANTA MONICA-CITY, WATER DIVISION		
Organization That Operates System:	1212 FIFTH ST., 3RD FLOOR SANTA MONICA, CA 90401		
Pop Served:	86905	Connections:	15905
Area Served:	SANTA MONICA

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

In March 1998, ATC Associates Inc. (ATC) performed a Phase I Environmental Site Assessment of Martin Cadillac-GMC Truck-Pontiac located at 12101 West Olympic Boulevard, Los Angeles, Los Angeles County, California, referred to as the "site." The study was performed for Martin Cadillac Company, Inc. and Comerica Bank to assess the site and surrounding properties for areas of potential environmental risk and liability that may have a negative impact on the site. This assessment included visual observations of the site and limited observations of surrounding properties, review of historical ownership and land use, review of regulatory database listings, interviews, and related sources.

In the professional opinion of ATC, an appropriate level of inquiry has been made into the previous ownership and uses of the property consistent with good commercial and customary practice in an effort to minimize liability, and no evidence or indication of Recognized Environmental Conditions has been revealed, except for the following:

- The service area houses 7 below-grade hydraulic lifts and 40 aboveground hoists. When the dealership opened in 1975, there were 47 below-grade hoists. As the below-grade hoists malfunctioned, they were removed and replaced by aboveground hoists. It is possible that hydraulic fluid has leaked into the subsurface, but no soil samples have been collected or analyzed to confirm that contamination is not present.
- Rinse water from the automobile washing area and the floor drains in the service area, paint shop and body shop are directed to the site's clarifier. The clarifier discharges to the sanitary sewer maintained by the City of Los Angeles. In 1993, Targhee, Inc. found trace concentrations of perchloroethene (PCE) at 12 and 18 feet below the surface near the outlet of the clarifier. No remedial action was deemed necessary at that time, but since that time no additional soil samples have been collected and analyzed to determine whether the concentration of PCE has increased due to possible leakage since 1993.

Because Recognized Environmental Conditions were identified during the performance of the Phase I ESA, further investigation and/or assessment is warranted in order to determine the nature, extent, magnitude, and materiality of Recognized Environmental Conditions at the property. ATC recommends conducting a soil investigation at 20 locations, between adjacent current and former below-grade hoists. ATC recommends that soil borings be advanced to 15 feet and soil samples collected at 10 and 15 feet be analyzed for total recoverable petroleum hydrocarbons (TRPH) using EPA Method 418.1. ATC also recommends advancing a soil boring to 20 feet near the outlet of the clarifier, collecting soil samples at 15 and 20 feet and analyzing them for volatile organic compounds (VOCs) using EPA Method 8010. The estimated cost of the additional investigation which we believe to be necessary is \$8,000. The estimated cost does not include the cost of additional investigations needed if contamination is found.

ATC's remaining investigative findings are summarized below:

- Martin Cadillac has operated a car sales and service facility since April 1975. Prior to the development of the site as a car dealership, the site was occupied by the Olympic Drive-in Movie Theater which dates back to at least 1940. Based on aerial photographs, the site was in agricultural production (flowers) prior to construction of the drive-in theater.

- There is currently one 10,000-gallon, double-walled fiberglass gasoline underground storage tank (UST) at the site. The UST was installed under permit in February 1996 and is equipped with an interstitial leak monitoring system. The UST and the leak detection system were last inspected by American Tank Testing in November 1997; at that time the system was found to be operating in compliance with the manufacturer's recommendations. According to Mr. Tait, the site contact, there has never been a leak from the UST. At this time, this UST does not appear to pose an environmental concern to the site.
- Four aboveground storage tanks (ASTs), one 1,500-gallon waste oil tank, one 1,000-gallon motor oil tank, one 1,000-gallon transmission fluid tank, and one 500-gallon ethylene glycol (engine coolant) tank, are located in the compressor room for the service garage. All of the ASTs were installed in 1996 and there has never been a report of a leak from these tanks. A spill containment berm surrounds the perimeter of the compressor room. These ASTs are connected to the service facility via overhead lines. No evidence of leakage or surficial staining around the ASTs was evident at the time of ATC's site visit. Five 20-gallon drums of 90-weight gear oil and grease are also stored in the compressor room. At this time, these tanks and stored drums do not appear to pose an environmental concern to the site.
- Five USTs, one 10,000-gallon gasoline tank, one 1,000-gallon motor oil tank, one 1,000-gallon waste oil tank, one 500-gallon transmission fluid tank, and one 500-gallon antifreeze tank, were removed from the site in January 1996. The soil excavated around each of the tanks contained low concentrations of contamination, but the soil samples collected from two feet below the excavated tank pits did not contain detectable contamination. The soil piles (368 tons) were removed and transported to the Morton Recycling Facility in Maricopa, California as non-hazardous petroleum-bearing waste. The City of Los Angeles Fire Department granted closure for the UST removal activities in May 1996. The State Water Resources Control Board's UST list, and the Cal EPA's CA 510 list still indicate that the site maintains five USTs, but there is currently only one UST on site. Given that the Fire Department granted closure for those USTs, they are not considered to pose an environmental liability to the site.
- Friable suspect asbestos-containing materials included two types of acoustical ceiling panels located in the showroom and the sales building. These materials were inaccessible and Mr. Tait did not want them sampled because they were installed after the 1994 Northridge earthquake. Non-friable suspect asbestos-containing materials include wallboard and floor tile inside the showroom/service building and the sales building. Because the suspect materials were undamaged, no further evaluation is recommended at this time.
- A transformer station maintained by the City of Los Angeles Department of Water and Power (DWP) is located in a locked room along the eastern side of the showroom/service building. According to Mr. Giddings at the DWP, the transformer inside the station contains 6 parts per million (ppm) of polychlorinated biphenyls (PCBs) and therefore, is not considered to be a PCB unit as defined by the United States Environmental Protection Agency (USEPA).
- Fluorescent lights were observed throughout the buildings. Because the site buildings were constructed in 1973, it is possible that the light ballasts contain PCBs. Two types of ballasts were inspected for PCB content labeling. Both ballasts were labeled as having "No PCBs." If ballasts are found during routine maintenance that do not have "non-PCB" labels, it should be presumed that

they contain PCBs and they should be handled and disposed according to local waste handling requirements for PCBs.

- Chevron Service Station #844 and Unocal Service Station #3019 are located east and south, respectively of the site and are leaking UST facilities. However, the Chevron Service Station is not expected to pose an environmental concern to the site because remedial action has been completed or deemed unnecessary and closure has been granted. Similarly, the Unocal Station is not expected to pose an environmental concern to the site due to its cross-gradient position.

RE: Phase II Environmental Assessment Report
12101 West Olympic Boulevard
Los Angeles, California 90025

Dear Mr. Manoledes:

The Phase II Environmental Assessment of the property as detailed in Targhee's proposal of February 9, 1993 was performed on May 12 and May 17, 1993. Soil sampling was attempted on May 12; however, loose sands around the clarifier precluded obtaining soil samples and no soil could be retrieved for analysis. Soil sampling was successful on May 17, 1993.

The results of the soil sampling are as follows:

Waste Fuel Drum Storage Area

Soil sample H-1 was obtained 18 inches below the asphalt in this area and analyzed for gasoline, benzene, toluene, ethyl benzene and xylenes (EPA Method 8010/8020). No detectable concentrations of these chemicals were found.

Clarifier

Soil samples were obtained at two and seven feet below the bottom of the clarifier (13 and 18 feet below the ground surface) and analyzed for halogenated volatile organics (chlorinated solvents, EPA Methods 8240/8010).

Initially the two-foot samples analyzed. The analysis of the two foot sample from the inlet of the clarifier (sample H-2 13') did not detect any halogenated volatile organic compounds. The seven-foot sample was not analyzed. The analysis of the two-foot sample from the outlet of the clarifier (H-3 13') detected 140 parts per billion of tetrachloroethene (perchloroethylene, PCE). Upon receiving the results of the two-foot sample, the seven-foot sample (H-3 18') was immediately analyzed (mandated holding times were maintained) with the concentration of PCE having been reduced to 6.4 parts per billion. Copies of the chain-of-custody form and laboratory analysis sheets are enclosed for your files.

Phase II Environmental Assessment Report
12101 West Olympic Boulevard
Los Angeles, California 90025
June 3, 1993

Upon reviewing the analytical data for this investigation, it is clear that there is a small pocket of PCE near the outlet of the clarifier two feet below the clarifier (13 feet below the ground surface, the clarifier is eleven feet deep) that rapidly diminishes to a barely detectable level seven-feet below the bottom of the clarifier (eighteen feet below the ground surface).

As stated in the Phase I Assessment Report, the depth to usable groundwater in the area of the subject property is estimated to be 95 feet below the ground surface. Due to this distance there are no potential threats to groundwater and no possibility of groundwater contamination. In fact, the 6.4 ppb of PCE found in the soil is only slightly above the concentration (5 ppb) of PCE considered safe to ingest in drinking water for 70 years. Additionally, the concentration of PCE in the soil would have to be greater than 14,000 ppb for the soil to be considered a hazardous waste.

It is the opinion of Targhee, Inc. that the detectable concentrations of PCE in the soil do not present a threat to human health or the environment and no additional investigation is warranted. However, since the clarifier has leaked, Targhee recommends that the clarifier be cleaned and lined (fiberglass paint, epoxy resin, etc.) to prevent future leaks through the cold joints or hairline cracks.

If you have any questions regarding this submittal, please don't hesitate to call me at 310-435-8080.

Sincerely,

Dave Broadbent
Environmental Consultant

Dear Mr. Tait:

Site Closure
Martin Cadillac
12101 West Olympic Boulevard
Los Angeles, California

The Fire Department has reviewed the Closure Report dated April 8, 1996, as submitted by Toxguard Systems, Incorporated.

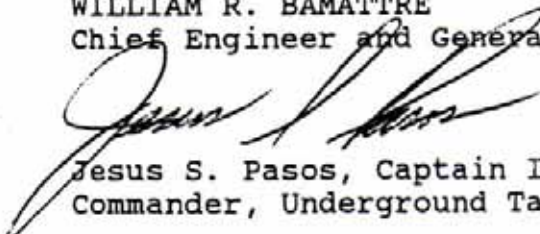

Based on the information provided to date, this Department has determined that no further action is required at this time.

Please note that this letter does not exempt you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Nor does it exempt you of the responsibility to correct additional or previously unidentified conditions at the site which cause or thereafter to cause, pollution or nuisance, or otherwise pose a threat to water quality or public health.

If you require additional information from the Los Angeles City Fire Department, contact Inspector Dennis H. Taylor of the Underground Tank Plan Check Unit, at (213) 485-7543.

Very truly yours,

WILLIAM R. BAMATTRE
Chief Engineer and General Manager

1.0 INTRODUCTION

This report details the methods and findings of the underground storage tank (UST) removal project conducted by Toxguard Systems, Inc. (Toxguard) at 12101 West Olympic Blvd., Los Angeles, California (See Index Map, Figure 1). On March 7, 1996, five underground storage tanks (Two (2) 1,000 gallon waste oil tanks, two (2) 500 gallon waste oil tanks and one (1) 10,000 gasoline tank) were removed with all associated piping under the direction of the City of Los Angeles Fire Department Underground Storage Tank Division. The location of the tanks are shown on the Site Plan, Figure 2. Tank removal permits were issued by the City of Los Angeles Fire Department. Permits appear in Appendix I.

2.0 TANK REMOVAL

On March 7, 1996, five USTs were excavated and exposed for cleaning. See Figure 2, Site Plan, for the location of the tanks. 1,683 gallons of rinseate was removed by vacuum truck, manifested and transported by JSE Environmental Services, EPA ID No. CAL000827857. The disposal site for the rinseate was Industrial Service Oil Company, Inc. of Los Angeles, California, EPA ID No. CAD099452708. The Uniform Hazardous Waste Manifest appears in Appendix II.

The tanks had no obvious holes, cracks or corrosion. The tanks were transported, as Non-Hazardous Waste, to American Metal Recycling of Ontario, California, for disposal. The Tank Certification Report appears in Appendix III. The tank disposal certificate appears in Appendix IV.

3.0 EXCAVATED SOIL CONDITIONS

Evidence of contamination was noted in the soil surrounding the USTs and dispensers during the course of the excavation. The soil was over excavated to remove impacted soil. All soil samples were obtained and analyzed as set forth in the tank closure permit issued by the City of Los Angeles Fire Department, Underground Storage Tank (UST) Division.

4.0 SOIL SAMPLE COLLECTION

Immediately following the tank removals, soil samples were collected from two feet beneath each tank invert with the assistance of a backhoe and collected from stockpiled spoils piles generated by the tank excavation. The location of the samples are shown on the Site Plan, Figure 2. Over excavation samples were collected from below the 10,000 gallon tank invert (Figure 3, Cross-Section A-A').

The soil samples were taken by a representative of Toxguard Systems, Inc. who is trained and experienced in soil sampling procedures and working under the direct supervision of a California

Registered Geologist. The samples were packed into 3-inch brass tubes without headspace, tightly sealed, labeled, and immediately placed in a cooler with ice and transported to Southland Technical Services of Montebello, California.

5.0 CHEMICAL ANALYSIS

Soil samples were analyzed for waste oil per EPA Method 418.1, for aromatic volatiles (BTEX) per EPA Method 8020, for total petroleum hydrocarbons per EPA Method 8015 (modified for gasoline) and for total lead per EPA Method 7420. A copy of the laboratory report and the Chain-of-Custody document that accompanied the samples appears in Appendix V.

6.0 DISCUSSION

Soil samples collected beneath the tanks and stockpiled soil samples indicated small concentrations of hydrocarbon compounds. Approximately 368 tons of stockpiled soil was transported and disposed under Non-Hazardous Waste Manifest at Morton Recycling facility in Maricopa, California. Copies of Non-Hazardous Manifests are presented in Appendix VI.

7.0 CONCLUSIONS

There was no indication during the removal of the UST's of any obvious holes, cracks or corrosion of the tanks. Subsequent soil sampling indicated elevated hydrocarbon concentrations beneath a former dispenser island. The soil in this area was over excavated to remove the impacted soil. Approximately 100 tons of material was removed from the area directly below the former dispenser. Vadose wells with monitors placed 8 feet north of the dispenser were also excavated because the monitors did not pick up any vapors due to the nature of the tight soils. The sidewall samples from the over excavation were relatively clean.

8.0 RECOMMENDATIONS

Based on the laboratory results and the clayey nature of the soil, we request closure of this UST case.

9.0 REPORT LIMITATIONS

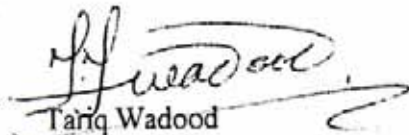

The results of this tank closure represent conditions at the specific time and location at which soil sample were collected and for the parameters analyzed for by the independent laboratory. It does not fully characterize the site for contamination or parameters not analyzed for by the laboratory. All the laboratory work cited in this report was prepared under the direction and management of the independent laboratory. The laboratory is solely responsible for the contents and conclusions of the laboratory data.

The work described herein has been performed by Toxguard Systems, Inc. and its licensed or certified subcontractors. The work has been performed in accordance with the professional standards and practices currently accepted in the Environmental/Geotechnical Industry. No other warranty is either expressed or implied.

If you have any questions regarding this report, please contact the undersigned.

Sincerely,

TOXGUARD

Dear Mr. Wadood:

Enclosed please find the analytical report for the samples received by STS Environmental Laboratories on 03-07-1996 and analyzed by the following EPA methods:

EPA 8020 (BTEX)/ 8015M (Gasoline)
EPA 418.1(TRPH)
EPA 7420 (Total Lead)

All analyses have met the QA/QC criteria of this laboratory.

The sample(s) arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by the CA DHS (Certificate Number 1986). Thank you for giving us the opportunity to serve you. Please feel free to call me at (213) 888-0728 if our Laboratory can be of further service to you.

Sincerely,

A handwritten signature in black ink, appearing to read "Roger Wang", is written over a horizontal line.

Mr. Tariq Wadood
Toxguard Systems, Inc.
32-B Mauchly
Irvine, CA 92718

Project: Martin Cadillac
Project Site: 12101 W. Olympic Blvd., LA
Sample Date: 03-11-1996
Lab Job No.: H60329

Dear Mr. Wadood:

Enclosed please find the analytical report for the samples received by STS Environmental Laboratories on 03-11-1996 and analyzed by the following EPA methods:

EPA 8020 (BTEX)/ 8015M (Gasoline)

All analyses have met the QA/QC criteria of this laboratory.

The sample(s) arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

STS Environmental Laboratory is certified by the CA DHS (Certificate Number 1986). Thank you for giving us the opportunity to serve you. Please feel free to call me at (213) 888-0728 if our Laboratory can be of further service to you.

Sincerely,

A handwritten signature in black ink, appearing to read "RW", is written over a horizontal line.

Roger Wang, Ph.D.
Laboratory Director
