

ERRATA TO THE FINAL EIR

FINAL EIR

PDF TR-1 on page IV-20 of Section IV, Mitigation Monitoring Program, in the Final EIR has been updated to include the revisions to this PDF presented on page II-16 in Section II, Corrections and Additions to the Final EIR.

The changes shown use ~~strike-out~~ for text that is removed and double underline for text that is added.

11. Transportation and Traffic

Project Design Features

PDF TR-1 As part of the Project, the Applicant shall expand its Transportation Demand Management (TDM) program on the East Campus to include additional busing and carpooling programs to mitigate the potential increase in vehicle trips to and from the Campus associated with the increase in student enrollment.

Any remote parking lots used in conjunction with buses or other shuttles to and from the East Campus shall not include use of remote lots on the adjacent Veterans Administration property or within the vicinity of the Project site. ~~be located outside of the 90049 zip code.~~

This Errata documents a change to the Final EIR. As demonstrated by the following discussion, the modification to the EIR does not result in new significant impacts and does not warrant recirculation of the EIR.

CEQA Guidelines Section 15088.5 requires that an EIR that has been made available for public review, but not yet certified, be recirculated only if significant new information has been added to the EIR. Pursuant to CEQA Guidelines section 15088.5(c), the entire document need not be circulated if revisions are limited to specific portions of the document. The relevant portions of CEQA Guidelines section 15088.5 read as follows:

(a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term “information” can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not “significant” unless the EIR is changed in a way that deprives the public of a meaningful opportunity

to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation include, for example, a disclosure showing that:

- (1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
 - (2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
 - (3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to adopt it.
 - (4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.
- (b) Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.

The information contained in this Errata 4 merely clarifies, amplifies, or makes insignificant changes to the information that has already been presented in the EIR. In addition, the modifications to the EIR are not significant because the EIR is not changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the Project. Based on the above, the clarification to the EIR would not result in any new significant impacts or a substantial increase in the severity of any impact already identified in the EIR. In addition, the clarification to the EIR merely clarifies, amplifies or makes insignificant refinements to the information that has already been presented in the EIR. Thus, none of the conditions in Section 15088.5 of the CEQA Guidelines are met, and recirculation is not required.
