## EXECUTIVE SUMMARY

This report describes the results of a Phase I Environmental Site Assessment of the area north of Prairie Street between Corbin and Shirley Avenues in Northridge, California (Figures 1 and 2). The purpose of the assessment was to provide Planning Associates, Inc. with information regarding potential areas of environmental concern that may be associated with past and/or current land use, both on and in the vicinity of the property.

A site and area reconnaissance was conducted on May 28, 2002. The property consists of fourteen parcels developed with several buildings occupied by commercial and light industrial businesses. The interiors of the buildings were not observed during the site reconnaissance. Table 1 summarizes the addresses of the site buildings and the current occupants.

According to the City of Los Angeles Fire Department records, chemical compounds, including hazardous materials are or were used at least nine of the site addresses. The chemical compounds include motor oil, freon, propane, kerosene, paint thinner, lacquer thinner, resins, solvents, ink, and chlorine compounds used in pool maintenance, compounds containing potassium hydroxide, sodium hydroxide, potassium carbonate, sulfuric acid, hexane, photo development chemicals, and isopropyl alcohol. Tables 1 and 2 summarize the hazardous materials in either current or former use at the nine addresses.

Commercial property is west of the site area, across Corbin Avenue, north of the site, and east of the site, across Shirley Avenue. Light Industrial property is south of the site, across Prairie Street. The site and surrounding area were developed in the late 1960s and early 1970s. Prior to development, the site was used for agriculture.

Environmental Data Resources, Inc. (EDR) was retained to perform an environmental database search for locations identified as hazardous substance and/or hazardous waste facilities near the subject property. Two of the site addresses are identified as RCRIS Small Quantity Generators. Aton Laboratory is located at 9345 Melvin Avenue, in the strip mall in the northwest corner of the site and is also on the HAZNET Database. There are no violations reported for the facility. According to the databases, Aton Laboratory has disposed of liquids with chromium VI, metal sludge, alkaline solution with metals, and other inorganic solid waste.

Teledyne Systems is identified at 9300 and 9310 Corbin Avenue, the current location of Modern Wholesale Electric and The Sports Section. The addresses are also on the FINDS and HAZNET databases. No violations have been reported for the facility. According to the databases, Teledyne disposed of oxygenated, halogenated, and hydrocarbon solvents and other off-specification, aged, or surplus organics.

A review of information available at the Los Angeles City Fire Department (LAFD) indicates that underground storage tanks have not been registered at the site addresses.

EDR identified several facilities located within the search distances specified in the American Society for Testing and Materials (ASTM); Standard Practice for Environmental Site Assessments: Phase I Site Assessment Process: ASTM Designation E1527-94. Based on the reported information, the off-site facilities identified by EDR do not constitute a “recognized environmental condition” as defined by ASTM.

Several light industrial operations occur at the site and many hazardous compounds are either currently used or have been used at the site. This assessment did not identify evidence of a reported spill or release of the hazardous compounds used at the site. AES recommends that if the site use changes from light industrial or if the buildings are demolished, that a site assessment that includes soil sampling be conducted.

# **PHASE I ENVIRONMENTAL ASSESSMENT**

## **Commercial and Light Industrial Development**

### **Northridge, California**

## **1.0 INTRODUCTION**

This report presents the results of a Phase I Environmental Assessment (ESA) conducted in May and June 2002 of the commercial and light industrial area located north of Prairie Street between Corbin and Shirley Avenues in Northridge, California. The Phase I ESA report was prepared for Ms. Carrie Riordan of Planning Associates, Inc. (client). This assessment was performed in accordance with the "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," issued by the American Society for Testing and Materials (ASTM Standard E1527-00).

### **1.1 Purpose**

The purpose of the Phase I Environmental Assessment was to provide the client with information regarding potential areas of environmental concern that may be associated with past and/or current land use, both on and in the vicinity of the property.

### **1.2 Limitations and Exceptions of Assessment**

American Environmental Specialists, Inc. (AES) is committed to providing quality, consulting services. However, Phase I Site Assessment work is not an exact science. The possibility of field and general conditions, beyond the control of AES, that affect our work or that present a concern for the safety of our employees, our consultants, building occupants, and the public at the site, and insurance constraints, requires that we qualify the services we provide with the following limitations:

Reasonable effort is made by AES personnel to locate all suspect hazardous materials. However, for any facility the existence of unique or concealed hazardous materials and underground storage tanks are a possibility.

This report was based on those conditions observed on the day(s) the field evaluation was accomplished. In the event that changes in the nature of the property have occurred, or additional relevant information about the property is subsequently discovered, the findings and recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed and the conclusion of this report is modified and verified in writing.

### **1.3 Limiting Conditions and Methodology Used**

The assessment was performed by Kristen Williamson, a California Registered Environmental Assessor with AES. The scope of services for this project was limited to the following tasks:

- A drive-by site reconnaissance performed to identify areas of potential environmental concern on the subject property. Access to the interiors of the buildings was not provided.
- Survey of the site vicinity to see if hazardous substances were observed or if conditions existed which could impact the site;
- A review of U.S. Geological Survey (USGS) topographic maps, aerial photographs, Los Angeles Fire Department records, and other available documents to assess past land usage as it relates to the environmental condition of the property;
- A review of public records to identify sites of environmental concern on or within a radius of the site as determined by ASTM.

## **2.0 SITE DESCRIPTION**

### **2.1 Site Location**

The site area is located north of Prairie Street between Corbin and Shirley Avenues in Northridge, California. Northridge is an unincorporated area in the city of Los Angeles. Figures 1 and 2 show the site location.

### **2.2 Site and Vicinity Characteristics**

The site is comprised of fourteen parcels zoned by the city of Los Angeles for light industrial development. Commercial and light industrial properties are north, east, south, and west of the site.

### **2.3 Site Improvements**

The property is improved with multiple buildings occupied by commercial and light industrial businesses. The buildings are separated by driveways alleyways, and parking areas. Melvin Avenue runs north to south through the center of the site area, dividing the site area approximately in two.

### **2.4 Environmental Liens**

At the present time, California does not have “State Super Lien Regulations”; whereby, there would be a state-imposed priority encumbrance against real property in order for California to recover the costs associated with a hazardous waste cleanup.

### **2.5 Current Uses of the Property**

The site use is light industrial and commercial. Table 1 lists the address, current occupant, and known hazardous materials usage for the site addresses.

## 2.6 Past Uses of the Subject Property

The site area was originally developed with the current site buildings around 1970. Prior to construction of the current site buildings, the site use was agricultural.

## 2.7 Current and Past Uses of Adjoining Properties

A K-Mart store is north of the site. The Northridge Fashion Center, a retail shopping mall is east of the site, across Shirley Avenue. Washington Mutual Bank is west of the site, across Corbin Avenue. A Northrop Grumman facility is south of the site, across Prairie Street. The Northrop Grumman facility is used for the design, production, and testing of components for guidance, identification, and control systems used in military aerospace applications.

The Northrop Grumman facility was built in 1966. Prior to 1966, the property use was agricultural. The USGS map shows an oil tank on the Northrop Grumman property in 1952. The oil tank was likely aboveground and associated with the agricultural activities on the property. Previous site assessments of the Northrop Grumman property did not identify records for the tank.

The Northridge Fashion Center buildings and the K-Mart building were constructed between 1967 and 1974. The Washington Mutual Bank Building was constructed between 1975 and 1989. Prior to the development of the adjoining properties, the adjoining property use was agricultural.

# 3.0 RECORDS REVIEW

## 3.1 Regulatory Agency Database Search

Environmental Data Resources, Inc. (EDR) was retained to perform an environmental database search for locations identified as hazardous substance and/or hazardous waste sites near the subject property. The search distance from the site was determined by ASTM standards. The EDR report contains additional lists beyond those specified in ASTM, which are discussed below if environmental concerns were noted. The complete EDR report including the names and descriptions of the agency lists searched, the search distance from the site, and the date the list was last updated is presented in Appendix D.

Regulatory List	ASTM Search Distance
Federal NPL	1 mile
Federal CERCLIS List	0.5 mile
Federal CERCLIS-NFRAP List	Property and Adjoining Properties
Federal RCRA CORRACTS TSD Facilities List	1.0 Mile
Federal RCRA Generators List	Property and Adjoining Properties
Federal ERNS List	Site Only
Annual Work Plan	1.0 Mile

CalSites	1.0 Mile
State Landfill or Solid Waste Disposal Lists	0.5 mile
State LUST	0.5 mile
State registered UST List	Property and Adjoining Properties

EDR did not identify properties within the specified search radius on the following lists:

- National Priorities List (NPL)
- CERCLIS and CERCLIS-NFRAP Databases
- Emergency Response Notification System (ERNS)
- Federal RCRA Generators List
- Annual Work Plan Database
- State Registered UST List
- State Landfill or Solid Waste Disposal Lists

Two of the site addresses are identified on the RCRIS Small Quantity Generators List. Aton Laboratory is located at 9345 Melvin Avenue, in the strip mall in the northwest corner of the site and is also on the HAZNET Database. There are no violations reported for the facility. According to the databases, Aton Laboratory has disposed of liquids with chromium VI, metal sludge, alkaline solution with metals, and other inorganic solid waste.

Teledyne Systems Company is identified at 9300 and 9310 Corbin Avenue, the current location of Modern Wholesale Electric and The Sports Section. The addresses are also on the FINDS and HAZNET databases. No violations have been reported for the facility. According to the databases, Teledyne disposed of oxygenated, halogenated, and hydrocarbon solvents and other off-specification, aged, or surplus organics.

A summary of the facilities located within the ASTM-specified search radius identified by EDR search is summarized below.

### **RCRA TSD and CORRACTS Databases**

The RCRA CORRACTS database is a listing of handlers with RCRA corrective action activity. The RCRA TSD database includes selected information for facilities that generate, store, treat, or dispose of hazardous waste. EDR identified one RCRA TSD and RCRA CORRACTS facility within a one-mile radius of the site. The facility, Cirtec Division of Interlink Corporation, is located about a mile southwest of the site area. The facility has been assigned a low corrective action priority.

### **RCRA Generators Database**

Two of the adjacent properties are on the RCRA Generators list. The Northrop Grumman facility (identified as Litton Guidance and Control) is located south of the site area, across Prairie Street and is a large quantity generator. The facility is also on the HAZNET and FINDS databases. No

violations have been reported for the facility. According to the databases, Northrop Grumman has disposed of oxygenated, halogenated, and hydrocarbon solvents and other off-specification, aged, or surplus organics.

Great Western Bank (also identified as Washington Mutual) is located west of the site area, across Corbin Avenue and is identified as a small quantity generator. They are also on the HAZNET, FINDS, and HIST UST databases. The HIST UST database identifies properties where one or more USTs have been removed. No violations are reported for the facility. According to the databases, the facility disposed of liquids with halogenated organic compounds, laboratory waste chemicals, waste oil, and tank bottom waste. Four USTs were previously operated at the facility. Three of the USTs contained gasoline and one contained diesel fuel. The USTs were installed in 1980. The year the USTs were removed is not reported. The facility address is not on the LUST list, indicating that there is not a reported leak associated with the former USTs.

### **Historical UST (HIST UST)**

K-Mart (also identified as Penske Auto center), located north of the site area, is on the HIST UST and HAZNET databases. According to the databases, Penske Auto Center disposed of oil/water sludge, aqueous solutions with organic residue, solvent waste, and other organic compounds. The facility also operated a 500-gallon UST that contained waste oil. The UST was installed in 1968 and it is not reported when the UST was removed.

### **California Leaking Underground Storage Tank (LUST) Report and Cortese List**

The California State Water Resources Control Board, in cooperation with the Office of Emergency Services, compiles lists of all leaks of hazardous substances from underground storage tanks in the State of California. The nine regional boards maintain information on all reported leak cases within their jurisdiction, both for those where the regional board and where other local agencies take the lead in overseeing investigations and remedial actions. The California Environmental Protection Agency's Department of Hazardous Materials Data Management collects the nine regional lists and publishes them as one database named LUST.

EDR identified 14 LUST facilities. Twelve of these facilities are also on the Cortese list. No further action is required at eleven of the LUST facilities. The three active LUST facilities are located more than a half-mile from the site area.

### **Cal-Sites Database**

One facility within one-mile of the site is identified on the Cal-Sites database. The facility, Commercial Recovery is located about three-quarters of a mile southwest of the site area. No further action is required at the facility.

Based on the reported locations and status of the identified facilities, they are unlikely to impact soil or groundwater below the site area at this time.

### 3.2 Physical Setting

According to the current USGS 7.5-Minute Series, Canoga Park, California Topographic Quadrangle (1952, photorevised 1967), the property is located at an elevation of approximately 855 feet above mean sea level. Topography in the area slopes toward the south-southeast. Depth to groundwater below the site area is unknown but is expected to follow topography and flow toward the south-southeast.

### 3.3 Historical Use

A history of the property from 1929 to the present was constructed and is based on a review of the USGS topographic map and a review of aerial photos. Aerial photographs were reviewed at the California State University, Northridge map library. Photographs were available for the years 1928, 1938, 1949, 1952, 1960, 1975, and 1989. The following table summarizes the findings of the aerial photograph review:

YEAR	SITE USE	SOURCE
1989	Site area developed in current configuration	Aerial Photo
1975	Site developed with most of the current site buildings	Aerial Photo
1967	Site is undeveloped and used for agriculture	USGS Map
1960	Site is undeveloped and used for agriculture	Aerial Photo
1952	Site is undeveloped and used for agriculture	Aerial Photo, USGS Map
1949	Site is undeveloped and used for agriculture	Aerial Photo
1938	Site is undeveloped and used for agriculture	Aerial Photo
1928	Site is undeveloped and used for agriculture	Aerial Photo

## 4.0 RESULTS OF ASSESSMENT

On May 28, 2002, Ms. Kristen Williamson performed a site reconnaissance to locate areas of potential environmental concern on the property and in surrounding areas. The site reconnaissance did not include the interiors of the buildings. The buildings were observed from the outside, primarily from the street or public right-of-way. Select features and locations were photographed during the reconnaissance and are included in Appendix "C"..

### 4.1 Hazardous Substances in Connection With Identified Uses

Because the interiors of the site buildings were not viewed, hazardous substances were not observed during the site reconnaissance. However, chemical compounds, including hazardous substances are known to currently be used or have been used in the past at nine of the site addresses.

LAFD records were requested for the sixteen site addresses. They have records or partial records for nine of the site addresses. A portion of the files for four of those addresses were destroyed because the occupant and user of hazardous materials no longer occupies the address. However, the inventory of compounds used was still available. The site address, current occupant, former occupant, and compounds used are summarized on Table 2. Compounds include motor oil, freon, propane, kerosene, paint thinner, lacquer thinner, resins, solvents, ink, chlorine compounds used in pool maintenance, compounds containing potassium hydroxide, sodium hydroxide, potassium carbonate, sulfuric acid, hexane, photo development chemicals, and isopropyl alcohol.

#### **4.2 Hazardous Substance and Unidentified Containers**

Unidentified containers were not observed during the site reconnaissance.

#### **4.3 Storage Tanks**

According to the LAFD's records, USTs have never been registered at the sixteen site addresses.

#### **4.4 Indications of PCBs**

Indications of PCBs were not observed during the site reconnaissance. Several pole-mounted transformers are located along Prairie Street and Melvin Avenue but are not located on the site properties.

#### **4.5 Indications of Solid Waste**

Indications of unauthorized dumping or solid waste disposal were not observed during the site reconnaissance.

#### **4.6 Results of Suspect ACM Observations**

An asbestos survey was not part of the scope of services for this assessment.

#### **4.7 Lead-Based Paint**

Sampling for lead-based paint was not part of this assessment.

#### **4.8 Radon**

Testing for radon was not included in the scope of this site assessment.

#### **4.9 Other Conditions of Concern**

Other conditions of concern were not identified.

## 5.0 SUMMARY AND CONCLUSIONS

The following summary is based on a historical review, a search of federal, state, and local records, and a visual assessment of the site:

A site and area reconnaissance was conducted on May 28, 2002. The property consists of fourteen parcels developed with several buildings occupied by commercial and light industrial businesses. The interiors of the buildings were not observed during the site reconnaissance. Table 1 summarizes the addresses of the site buildings and the current occupants.

According to the City of Los Angeles Fire Department records, chemical compounds, including hazardous materials are or were used at least nine of the site addresses. The chemical compounds include motor oil, freon, propane, kerosene, paint thinner, lacquer thinner, resins, solvents, ink, and chlorine compounds used in pool maintenance, compounds containing potassium hydroxide, sodium hydroxide, potassium carbonate, sulfuric acid, hexane, photo development chemicals, and isopropyl alcohol. Tables 1 and 2 summarize the hazardous materials in either current or former use at the nine addresses.

Commercial property is west of the site area, across Corbin Avenue, north of the site, and east of the site, across Shirley Avenue. Light Industrial property is south of the site, across Prairie Street. The site and surrounding area were developed in the late 1960s and early 1970s. Prior to development, the site was used for agriculture.

Environmental Data Resources, Inc. (EDR) was retained to perform an environmental database search for locations identified as hazardous substance and/or hazardous waste facilities near the subject property. Two of the site addresses are identified as RCRIS Small Quantity Generators. Aton Laboratory is located at 9345 Melvin Avenue, in the strip mall in the northwest corner of the site and is also on the HAZNET Database. There are no violations reported for the facility. According to the databases, Aton Laboratory has disposed of liquids with chromium VI, metal sludge, alkaline solution with metals, and other inorganic solid waste.

Teledyne Systems is identified at 9300 and 9310 Corbin Avenue, the current location of Modern Wholesale Electric and The Sports Section. The addresses are also on the FINDS and HAZNET databases. No violations have been reported for the facility. According to the databases, Teledyne disposed of oxygenated, halogenated, and hydrocarbon solvents and other off-specification, aged, or surplus organics.

A review of information available at the Los Angeles City Fire Department (LAFD) indicates that underground storage tanks have not been registered at the site addresses.

EDR identified several facilities located within the search distances specified in the American Society for Testing and Materials (ASTM); Standard Practice for Environmental Site Assessments: Phase I Site Assessment Process: ASTM Designation E1527-94. Based on the reported

information, the off-site facilities identified by EDR do not constitute a “recognized environmental condition” as defined by ASTM.

Several light industrial operations occur at the site and many hazardous compounds are either currently used or have been used at the site. This assessment did not identify evidence of a reported spill or release of the hazardous compounds used at the site. AES recommends that if the site use changes from light industrial or if the buildings are demolished, that a site assessment that includes soil sampling be conducted.

# EXECUTIVE SUMMARY

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## FEDERAL ASTM STANDARD

**CERCLIS-NFRAP:** As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

A review of the CERCLIS-NFRAP list, as provided by EDR, and dated 11/21/2001 has revealed that there are 2 CERCLIS-NFRAP sites within the searched area.

## EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D003	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

## FEDERAL ASTM STANDARD RECORDS

### **NPL: National Priority List**

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

### **CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System**

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

### **CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned**

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

### FEDERAL ASTM SUPPLEMENTAL RECORDS

**BRS:** Biennial Reporting System

Source: EPA/NTIS  
Telephone: 800-424-9346

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/99

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Oil/Gas Pipelines/Electrical Transmission Lines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 1999 from the U.S. Fish and Wildlife Service.
