Subject: RE: Meeting for new Project: 3700 Wilshire Blvd

Hi Wes,

We've gone through an analysis of the 3700 Wilshire project in MXD (recently rename Main Street). Please see Table 1 attached. The analysis on Main Street was performed at a neighborhood analysis level. Main Street revealed a 9% daily, 13% AM, and 15% PM peak hour internal capture and 27% daily, 35% AM, and

29% walk/bike/transit reduction. The overall reductions were 36% daily, 48% AM, and 44% PM. I have updated the trip generation with internal, walk, bike, and transit credits that reflect the reduction outputs from Main Street. I also updated the high-rise condominium rate to the regular condominium/townhouse ITE rate. Please see updated trip generation in the MOU attached.

Would you and Tom Carranza have time for a phone call next week? We'd like to explain the results and assumptions in more detail.

Thank you,

-Amanda

Hi Amanda,

I have been talking over the internal trip capture credit you are showing on the most recent MOU submittal. The residential portion still seems to be a bit high. I checked on other mixed-use projects and we usually do not approve of an internal trip credit over 15%. For example, we are currently reviewing the Hollywood Crossroads project (which is huge and contains hotel and residential) and it is not taking any internal trip credit for the residential. We would prefer that you adjust the number to the same 13% you are using for the other uses.

Wes

On Wed, Jun 15, 2016 at 10:43 AM, Amanda Heinke <a.heinke@fehrandpeers.com> wrote:

Hi Wes,

Yes, the internal capture sheets are attached for your review. Actually, I realized that for the residential internal calculation, the internal capture percentage calculations were referencing the high-rise apartment rates since the project was considered to be apartments at one point. We corrected the reference to the high-rise condominium trips. This had the effect of changing the trip generation very slightly. Attached is the updated MOU to reflect this change.

I also tracked down the data on the ITE apartment rates vs high-rise rates that we put together a while back for your reference and files.

Can you send me the MOU review fee with the instructions for online payment?

We are going to update the shared parking memo per our conversations yesterday. When we have an updated shared parking memo, we will send to you for your files and review.

Thank you,

-Amanda

Hi Amanda,

Can you send over those internal trip credit calculations after all? I went over the internal credits with Tomas and they seem to be quite high.

Thanks,

Wes

Mr. Carranza,

Jamison properties is pursuing to develop a project located at 3700 Wilshire Blvd. The project is scheduled to include 506 residential apartments and ground floor retail. The project team would like to have LADOT's input on a shared parking approach as well as the draft MOU.

Would you be able to meet with Tom Gaul and I any day during the week of June 13-17th, or the week after? If so, please let me know what day/times work for your schedule.

Thank you in advance,

TRAFFIC STUDY - MEMORANDUM OF UNDERSTANDING (MOU)

This MOU acknowledges that the traffic study for the following project will be prepared in accordance with the latest version of LADOT's Traffic Study Policies and Procedures:

Project Name: 3700 Wilshire
Project Address: 3700 Wilshire Boulevard, Los Angeles, CA 90010
Project Description: See Figure 1A,B,C and D. Project includes 506 condominium units and 62,035 sf retail/restaurant.

Geographic Distribution: N ___ % S ___ % E ___ % W ___ % **See Figure 2.**
Attach graphic illustrating project trip distribution percentages at the studied intersections

Trip Generation Rate(s): ITE 9th Edition / Other **See Table 1.**
Attach trip generation table with a description of the proposed land uses, ITE rates, estimated morning and afternoon peak hour volumes (ins/out/totals), proposed trip credits, etc.

| | <u>in</u> | <u>out</u> | <u>total</u> |
|----------|------------|------------|--------------|
| AM Trips | <u>49</u> | <u>152</u> | <u>201</u> |
| PM Trips | <u>178</u> | <u>80</u> | <u>258</u> |

Project Buildout Year: 2020
Ambient or CMP Growth Rate: 1 % Per Yr.
Related Projects: **See Attached Table 2 and Figure 3.**

Subject to Freeway Impact Analysis in addition to CMP Analysis: YES x NO (See Attachment A)
(freeway analysis screening filter should be included in this MOU; selecting "yes" implies that at least one criteria was satisfied)

Study Intersections: See Figure 2.

Notes:

[a] Source: Institute of Transportation Engineers (ITE), *Trip Generation, 9th Edition*, 2012

[b] Internal capture represents the percentage of trips between land uses that occur within the site. Main Street model calibration of base ITE rates reflecting project & site specific characteristics.

[c] The transit credit is based on LADOT's *Traffic Study Policies and Procedures*, August 2014. The guidelines state that up to 25% transit credit may be taken for projects adjacent to a transit station or Rapid Bus stop.

[d] The pass-by credit is based on Attachment I of LADOT's *Traffic Study Policies and Procedures*, August 2014.

[e] The addition of the project land uses on site creates internalization opportunities with the existing office space where these trips were otherwise necessary. The office space internalization credit accounts for these trips not on the project.

MOU ATTACHMENT A
FREEWAY SCREENING FOR 3700 WILSHIRE PROJECT IN ACCORDANCE WITH SCREENING CRITERIA
DESCRIBED IN SECTION 3 OF THE "AGREEMENT BETWEEN CITY OF LOS ANGELES AND CALTRANS
DISTRICT 7 ON FREEWAY IMPACT ANALYSIS PROCEDURES" (DECEMBER 2015)

INTRODUCTION

Section 3.1 of the "Agreement Between City of Los Angeles and Caltrans District 7 On Freeway Impact Analysis Procedures" originally dated October 2013 specifies the freeway mainline and ramp screening criteria for development projects in the City of Los Angeles. Section 3.1 was amended in December of 2015 with the following threshold criteria:

"City will require Project applicants to work with Caltrans and prepare a Freeway Impact Analysis, utilizing Caltrans' "Guide for the Preparation of Traffic Impact Studies" ("TIS Guide"), for land use proposals that meet any of the following criteria:

- The project's peak hour trips would result in a 1-percent or more increase to the freeway mainline capacity of a freeway segment operating at level-of-service (LOS) E or F (based on an assumed capacity of 2,000 vehicles per hour per lane); or
- The project's peak hour trips would result in a 2-percent or more increase to the freeway mainline capacity of a freeway segment operating at LOS D (based on an assumed capacity of 2,000 vehicles per hour per lane); or
- The project's peak hour trips would result in a 1-percent or more increase to the capacity of a freeway off-ramp operating at LOS E or F (based on an assumed ramp capacity of 850 vehicles per hour per lane); or
- The project's peak hour trips would result in a 2-percent or more increase to the capacity of a freeway off-ramp operating at LOS D (based on an assumed ramp capacity of 850 vehicles per hour per lane)."

The purpose of this analysis is to apply the screening criteria to determine whether a Freeway Impact Analysis would be required for the 3700 Wilshire project. The methodologies used to conduct the screening analysis for the project, and the results of the screening, are described below.

FREEWAY MAINLINE SEGMENT SCREENING

The 3700 Wilshire project is located at 3700 Wilshire Boulevard, Los Angeles, CA 90010 with regional access provided by the Interstate 10 (I-10) freeway and US Route 101 (US-101). Five sections of freeways were selected for a freeway screening analysis:

- I-10 Freeway west of Western Avenue – 5 lanes eastbound and 6 lanes westbound
- I-10 Freeway east of Western Avenue – 6 lanes in each directions
- US-101 north of Western Avenue – 4 lanes in each directions
- US-101 south of Silverlake Boulevard (north of Rampart Boulevard) – 4 lanes in each directions
- US-101 south of Rampart Boulevard – 4 lanes in each directions

Project trips on the freeway facilities are shown in Table A1 and the mainline screening analysis is shown in Table A2. As shown in Table A2, the freeway capacity is 8,000 vph for 4 lanes, 10,000 for 5 lanes, and 12,000 for 6 lanes. The most rigorous trigger criteria for LOS E/F operations was used for the screening analysis. For LOS E or F operations, the threshold test is whether the project would use 1% of the available capacity (80 vph for 4 lanes, 100 vph for 5 lanes, 120 vph for 6 lanes). Because no more than 27 project trips are

expected to occur in any analyzed peak hour on any particular segment, the mainline screening threshold is not met and therefore a Freeway Impact Analysis is not required.

FREEWAY RAMP SCREENING

Project trips on the freeway off-ramp facilities are shown in Table A1 and the freeway off-ramp screening analysis is shown in Table A3. Six freeway off-ramps were selected for a freeway screening analysis. The most rigorous trigger criteria for LOS E/F operations was used for the screening analysis. For LOS E or F operations, the threshold test is whether the project would use 1% of the capacity (based on an assumed ramp capacity of 850 vehicles per hour per lane), or approximately 9 vph for 1-lane and 17 vph for 2-lanes. Because no more than 5 project trips are expected to occur in any analyzed peak hour on 1-lane ramps and no more than 13 project trips are expected to occur in any analyzed peak hour on 2-lane ramps, the freeway off-ramp screening thresholds are not met and therefore a Freeway Impact Analysis is not required.
