We are in the midst of the Corona Virus Pandemic and now the City is trying to approve an enormous high density project. One of the main reasons New York City has had such a deadly tragedy is the density of the City. Building this monstrosity will cause enormous problems with utilities such as water and sewer. We don't have sufficient supply of water and certainly our antiquated sewer system will have many more problems with burst pipes etc. Traffic, already a nightmare will become even worse for everyone. If you think people who can afford these units will use the inadequate public transportation, you are kidding yourself. Building on and around a major earthquake fault is just criminal.

We submit our strong objection.
