Whether you are in a high risk zone or not, you may need [flood insurance](https://www.fema.gov/national-flood-insurance-program) because most homeowners insurance doesn't cover flood damage. If you live in an area with low or moderate flood risk, you are 5 times more likely to experience flood than a fire in your home over the next 30 years. For many, a National Flood Insurance Program's flood insurance policy could cost less than \$400 per year. Call your insurance agent today and protect what you've built.

Learn more about [steps you can take](https://www.fema.gov/what-mitigation) to reduce flood risk damage.

PHASE I ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE

The following questionnaire is required by the ASTM Standard E 1527-13, which adheres to the All Appropriate Inquiries (AAI) Rule (United States Environmental Protection Agency) (40 CFR 312).

As defined by ASTM, the User of the report is the “party seeking to use Practice E 1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The user has specific obligations for completing a successful application of this practice.”

PROPERTY ADDRESS:	1200 North Cahuenga Boulevard
PROPERTY CITY, STATE ZIP:	Los Angeles, CA 90038

1. Environmental liens that are filed or recorded against the property (40 CFR 312.25)

Did a search of recorded land title records (or judicial records) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

YES NO

2. Activity and use limitations (AULs) that are in place on the property or that have been filed or records against the property (40 CFR 312.26(a)(1)(v) and (vi))

Did a search of recorded land title records (or judicial records) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

YES NO

There is a CUP but it is unrecorded.

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

YES NO

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29)

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

YES NO

5. Commonly known or reasonably ascertainable information about the Property (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?

YES NO

a. Do you know the past uses of the property?

YES NO

b. Do you know of specific chemicals that are present or once were present at the property?

YES NO

c. Do you know of spills or other chemical releases that have taken place at the property?

YES NO

d. Do you know of any environmental cleanups that have taken place at the property?

YES NO

e. Do you have any prior knowledge that the property was developed as a gas station, dry cleaner, manufacturing/industrial facility in the past?

YES NO

f. Are you aware of historical use of hazardous materials or petroleum products used or present on the property?

YES NO

g. Do you know if the property is currently or was formerly equipped with underground storage tanks (USTs) or septic tanks?

YES NO

h. Do you know of any past, threatened or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products involving the property by any owner or occupant of the property?

YES NO

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

YES NO

RE: Phase I Environmental Site Assessment
Arshag Dickranian Armenian School
1200 North Cahuenga Boulevard
Los Angeles, California 90038
VERTEX Proj. No. 35138

Dear Ms. Fitzgerald:

The Vertex Companies, Inc. (VERTEX) is pleased to submit this Phase I Environmental Site Assessment (ESA) report for the above referenced property (the site). The purpose of this assessment was to identify Recognized Environmental Conditions (RECs) in connection with the site. A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property; (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.” It does not include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Our work was conducted in general conformance with proposal P.1108.15, executed by Ms. Sue Fitzgerald on July 2, 2015, and in accordance with the general provisions of the E 1527-13 American Society for Testing and Materials (ASTM) document entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" for commercial real estate, as well as the U.S. Environmental Protection Agency's (USEPA) All Appropriate Inquires (AAI) Final Rule of November 1, 2005, as amended December 30, 2013. To the best of our knowledge, this Phase I ESA report is true and accurate.

VERTEX also assessed the site for the potential presence of asbestos-containing materials (ACM), lead-based paint (LBP), and radon.

We declare that, to the best of our professional knowledge and belief, we meet the definition of an Environmental Professional as defined in §312.10 of 40 CFR Part 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Please do not hesitate to contact us at your convenience should you have any questions or comments regarding this report or our recommendations. It has been a pleasure working with you on this project.

Sincerely,

The Vertex Companies, Inc.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

**Arshag Dickranian Armenian School
1200 North Cahuenga Boulevard
Los Angeles, California 90038
VERTEX Proj. No. 35138**

1.0 SUMMARY

On July 2, 2015, The Vertex Companies, Inc. (VERTEX) was contracted by Ms. Sue Fitzgerald of STORE Capital to conduct a Phase I Environmental Site Assessment (ESA) of the Arshag Dickranian Armenian School, located at 1200 North Cahuenga Boulevard in Los Angeles, California (the site). According to the Los Angeles County Assessor, the site consists of three parcels of land occupying a total of approximately 1.2 acres. The three site parcels are identified as Parcel Numbers 5533-006-032, 5533-006-033, and 5533-006-034. The site is improved with one building consisting of two wings and approximately 32,799 square feet; the west wing is a two-story building and the east wing is a two-story building with a mezzanine. The east building wing included a single level of subterranean parking garage with a reported area of 23,750 square feet. The west wing of the present day site building was constructed in 1981 and the east wing of the present day site building was constructed in 2004. The site is currently occupied by Arshag Dickranian Armenian School. Current tenant operations are limited to teaching, recreational, minor food preparation, and office/administrative related activities. According to the Los Angeles County Recorder's Office, the site is currently owned by Tekeyan Cultural Association, Inc. The purpose of this assessment was to identify Recognized Environmental Conditions (RECs) in connection with the site.

ASTM Findings

- Based on our review of readily available historical information, it appears that the site was developed with dwellings from at least 1926 to at least 1981 when the dwellings along Lexington Avenue were removed and developed with the west wing of the present day site building. By 2005, the dwellings along La Mirada Avenue were removed, and the site was developed with the east wing of the present day site building and the present day recreational

courts in their present configuration. The site has been occupied by Arshag Dickranian Armenian School and Tekeyan Cultural Association from at least 1986 to the present day. No environmental concerns were identified with respect to current or past use of the site.

- The site is located in an area of residential and commercial properties. Review of readily available historical information reveals that the surrounding properties to the north and south consisted of dwellings, the east adjacent property consisted of dwellings and a church, the west and southwest adjacent properties were vacant, beyond which were dwellings since at least 1926. The property to the east of the site was developed with the present day apartment building in the late 1960s. The properties to the south of the site were developed with the present day apartment buildings and dwellings in the 1950s/1960s. The properties to the west of the site were developed with the present day apartment buildings in the 1950s. See Section 6.2 for discussion on regulatory listings related to the adjoining properties located to the east and northeast (historical dry cleaners and historical auto station) and southwest (historical dry cleaners and historical auto station) of the site. No environmental concerns were identified with respect to current or past use of the adjoining properties.
- VERTEX conducted a regulatory review that included a search of state and federal regulatory databases to identify environmental concerns for the site and surrounding properties. According to the information presented in the regulatory database report, the site is listed on the HAZNET database for disposing unknown waste from the site in 2012. The site is listed on the FINDS database pointing to other sources containing more information related to the above discussed listing. No violations and/or releases were reported at the site and as such, these listings do not represent a concern to the site. Several facilities within the ASTM search distances of the site were identified on regulatory databases. Fountain-Vine Plaza property located at 1253 North Vine Street, about 234 feet to the northeast (hydraulically upgradient direction) of the site was listed as an open cleanup program property on the SLIC database, case #1196. According to the latest monitoring records (April of 2013) reviewed on the Regional Water Quality Control Board's (RWQCB) GeoTracker website, the monitoring well closest to the site, MW-2 (about 370 feet to the northeast of the site), measured tetrachloroethylene (PCE) at 26.1 micrograms per liter ($\mu\text{g/L}$). Based on

reviewed records, the concentration of contaminants appears to be on the east side of this property. Although no RECs were identified based on the distance of this property from the site and the ongoing investigation at this property by the identified responsible party, VERTEX cannot rule out the potential for impacts at the site associated with this upgradient property. However, VERTEX notes that shallow soils underlying the site vicinity consist of sandy silts and clays. The San Francisco Bay RWQCB Groundwater Environmental Screening Level (ESL) for Evaluation of Potential Vapor Intrusion for PCE with fine-coarse mix soils under commercial/ industrial use is 640 µg/L. The ESL for PCE with fine-coarse mix soils under residential use is 63 µg/L. Based on this information, this facility does not appear to pose a potential vapor intrusion issue to the site. The remaining facilities were not considered an environmental concern to the site based on distance, regulatory status, and/or apparent groundwater gradient.

Non-ASTM Additional Services

In accordance with the proposed scope of work, VERTEX conducted additional services as discussed in Section 9.0 of this report, including the assessment of ACMs, LBP, and radon. Assessment of the additional services did not identify Business Environmental Risks associated with the site.

Conclusions

VERTEX has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, of the Arshag Dickranian Armenian School located at 1200 North Cahuenga Boulevard in Los Angeles, California. Exceptions to, or deletions from, this practice are described in Section 8.0 of this report. This assessment has revealed no evidence of RECs in connection with the site. As such, no additional investigation is recommended at this time.

2.0 SITE AND VICINITY CHARACTERISTICS

2.1 Site Description

The site is located at 1200 North Cahuenga Boulevard in Los Angeles, California. According to the Los Angeles County Assessor, the site consists of three parcels of land occupying a total of approximately 1.2 acres. The three site parcels are identified as Parcel Numbers 5533-006-032, 5533-006-033, and 5533-006-034. The site location is shown on Figure 1 - Site Locus Map.

2.2 Site Improvements

The site is improved with one building consisting of two wings and approximately 32,799 square feet; the west wing is a two-story building and the east wing is a two-story building with a mezzanine. The east building wing included a single level of subterranean parking garage with a reported area of 23,750 square feet. The west wing of the present day site building was constructed in 1981 and the east wing of the present day site building was constructed in 2004. The site building is constructed of a mixture of concrete, wood, and steel framing elements, and the exterior walls consist of stucco panels. The building foundation is concrete slab on grade. The roof is a flat built up roof with metal roof coverings. Finish materials within the building interior areas consist of painted gypsum board walls; painted gypsum board and suspended acoustical ceiling tiles; and vinyl tile and carpet flooring.

For a layout of the site, please refer to Figure 2 - Site Plan. Photographic documentation of the site and surrounding areas is presented in Appendix A.

2.3 Tenant Operations

The site is currently occupied by Arshag Dickranian Armenian School, a school. Current tenant operations are limited to teaching, recreational, minor food preparation, and office/administrative related activities. Hazardous materials on-site are limited to small quantities of paint and common cleaning/ maintenance chemicals located in the janitorial closets and kitchen. All

chemicals were observed to be well stored, with no signs of significant staining or a release. Significant quantities of petroleum products and hazardous material usage or storage were not observed on-site. As such, the current on-site operations are not considered an environmental concern.

2.4 Current Uses of Adjoining Properties

The site was observed to be located in a residential and commercial area. Adjoining properties were observed (from the site or from public access areas) for signs of RECs and their potential to pose an environmental concern to the site. The uses and features of adjoining properties are described in the following table. The locations of these properties relative to the site are depicted on Figure 2 – Site Plan.

NEARBY/ADJOINING PROPERTY SUMMARY		
DIRECTION	PROPERTY USE	CONCERNS
North	La Mirada Avenue bounds the site to the north, beyond which is residential development consisting of single facility dwellings.	None
East	To the east of the site is an apartment building addressed 6333 Lexington Avenue.	None
South	Lexington Avenue bounds the site to the south, beyond which are residential buildings.	None
West	North Cahuenga Boulevard bounds the site to the west, beyond which are residential buildings.	None

The review of current adjoining properties did not identify specific concerns or RECs.

2.5 Physical Setting Source(s)

Physical setting sources specified in Section 12.0 of this report were reviewed to provide information about the geology and hydrogeology of the site.

2.5.1 Topography

A review of the 1994 USGS Topographic Quadrangle Map of Hollywood, California indicates that the surface elevation of the site is approximately 310 feet above mean sea level (amsl). The topography of the site and site area is generally flat, but slopes generally to the southwest.

2.5.2 Surface Water

No naturally-occurring surface water bodies were observed on or in the immediate vicinity of the site.

2.5.3 Geologic Conditions

According to the United States Department of Agriculture (USDA) Web Soil Survey, soil at the site consists primarily of Urban Land soil. Urban Land soils are those that have been so altered by human activities that the soil has lost its original characteristics and are thus unidentifiable. Bedrock outcrops were not observed during the site reconnaissance.

2.5.4 Groundwater

Based on information available on the State of California Regional Water Quality Control Board's (RWQCB's) GeoTracker website, the 2012 Case Closure Assessment Report (prepared for Fountain Vine-Plaza, located approximately 400 feet northeast of the site) indicated groundwater to be present at depths between 27 and 32 feet below ground surface (bgs) and flowed to the southwest. Groundwater at the site is expected to flow at a similar depth in the same direction. Actual local groundwater flow direction can be influenced by factors such as local surface topography, underground structures, seasonal fluctuations, soil and bedrock geology, and production wells, none of which were considered during this study.

3.0 USER-PROVIDED INFORMATION

VERTEX requested the following information about the site from STORE Capital (“User”):

- An evaluation of the presence of environmental cleanup liens for the site;
- Activity and use limitations (AULs) such as engineering controls (e.g., slurry walls, caps) and land use restrictions or institutional controls (e.g., deed restrictions, covenants) that may be in place for the site;
- Specialized knowledge that includes personal knowledge or experience related to the site or nearby properties based on professional experience or knowledge of the site;
- Fair market value (FMV) to evaluate whether the purchase price of any parcel was significantly below FMV;
- Obvious indicators that involve past or present spills, stains, releases, cleanups on or near the site;
- Common knowledge about use of specific chemicals, possible contamination, or past use of the site and surrounding area; and,
- Reason for Performing the ESA.

Ms. Sue Fitzgerald stated that the work was being conducted in support of STORE Capital requirements. Ms. Fitzgerald provided VERTEX with the name of the site contact. No other relevant information regarding the site was provided by the Client.

4.0 INTERVIEWS

VERTEX conducted an interview regarding site history and the current on-site operations with the following individuals:

INTERVIEWS		
NAME/ COMPANY	TITLE/POSITION	INFORMATION PROVIDED
Jose Aguilar	Maintenance Personnel	Provided information regarding current site operations
Municipal Officials	Various	Provided municipal information

Information obtained from these interviews is discussed in relevant sections of this report. Please refer to Section 6.3 for a summary of information obtained from municipal inquiries.

5.0 HISTORICAL RECORDS REVIEW

Past land uses for the site and adjoining properties were assessed to identify historical practices or conditions that may have impacted the site. This was accomplished by reviewing historical information from several sources including but not limited to an interview with a site representative, review of available previous environmental reports and ownership records, and review of historical information obtained from regulatory sources, aerial photographs, city directories, and historical maps.

5.1 Historical Site Use Summary

Based on our review of readily available historical information, it appears that the site was developed with dwellings from at least 1926 to at least 1981 when the dwellings along Lexington Avenue were removed and developed with the west wing of the present day site building. By 2005, the dwellings along La Mirada Avenue were removed, and the site was developed with the east wing of the present day site building and the present day recreational courts in their present configuration. The site has been occupied by Arshag Dickranian Armenian School and Tekeyan Cultural Association from at least 1986 to the present day. See Section 6.1 for regulatory listings associated with the site.

5.2 Historical Adjoining Properties Use Summary

The site is located in an area of residential and commercial properties. Review of readily available historical information reveals that the surrounding properties to the north and south consisted of dwellings, the east adjacent property consisted of dwellings and a church, the west and southwest adjacent properties were vacant, beyond which were dwellings since at least 1926. The property to the east of the site was developed with the present day apartment building in the late 1960s. The properties to the south of the site were developed with the present day apartment buildings and dwellings in the 1950s/1960s. The properties to the west of the site were developed with the present day apartment buildings in the 1950s. See Section 6.2 for discussion on regulatory listings related to the adjoining properties located to the east and northeast (historical

dry cleaners and historical auto station) and southwest (historical dry cleaners and historical auto station) of the site. No environmental concerns were identified with respect to current or past use of the adjoining properties.

5.3 Previous Environmental Reports

VERTEX was not provided with any previous reports for the site:

5.4 Prior Ownership

VERTEX obtained site ownership information from the Los Angeles County Recorder’s Office. The site is currently owned by Tekeyan Cultural Association, Inc. Available ownership information for this property is summarized below.

DEED RECORDS REVIEW FOR 5533-006-033				
GRANTOR	GRANTEE	DOCUMENT TYPE	DOCUMENT NUMBER	DATE
Executor of the Estate of Rodolfo P. Silva	Tekeyan Cultural Association, Inc.	Grant Deed	19972025859	12/29/1997

DEED RECORDS REVIEW FOR 5533-006-034				
GRANTOR	GRANTEE	DOCUMENT TYPE	DOCUMENT NUMBER	DATE
Kathryn N. Browne-Olson	Tekeyan Cultural Association, Inc.	Grant Deed	20001554743	10/4/2000

Deed records for site parcel identified by Parcel Number 5533-006-033 were not readily available for review. No evidence of prior owners of environmental concern was identified in the deed records reviewed. Additionally, no environmental liens or AULs were noted through review of ownership records. Prior owners of the site were not available to be interviewed.

5.5 City Directories

VERTEX reviewed historical city directory information for the site and adjoining properties as provided by EDR. Copies of select city directories are included in Appendix C. A summary of listings is presented below.

CITY DIRECTORY REVIEW			
YEAR	SUMMARY (ON-SITE)	SUMMARY (OFF-SITE)	CONCERNS
1933	Residential (individual names).	Several residential (individual names) listings of no significant concern were noted in the vicinity of the site. Brush Mary L wid N J clo clnr was identified at 1227 Vine Street.	See below
1937	Residential (individual names).	Several residential (individual names) and commercial (office/retail) listings of no significant concern were noted in the vicinity of the site. Samonji Miyo hd Indy was identified at 1144 Cahuenga Boulevard. Hing Lung Indy was identified at 1227 Vine Street.	See below
1942	No listings.	Several residential (individual names) and commercial (office/retail) listings of no significant concern were noted in the vicinity of the site. Rucker Richd H gas station was identified at 1201 Cahuenga Boulevard.	See below
1951	Cahuenga Polyak Esti r	Several residential (individual names) and commercial (office/retail) listings of no significant concern were noted in the vicinity of the site. Cahuenga BI Richfield Service Stations was identified at 1201 Cahuenga Boulevard.	None. The service station was not listed in the EDR regulatory database.
1976	Canokrungse Panya	Several residential (individual names) and commercial (office/retail/restaurant) listings of no significant concern were noted in the vicinity of the site.	None
1981	Balian Construction	Several residential (individual names) and commercial (office/retail/restaurant) listings of no significant concern were noted in the vicinity of the site. Vine Auto Center was identified at 1219 Vine.	See below
1986	Tekeyan Armenian Cultural Association & Ashrag Dickranian Armenian School	Several residential (individual names) and commercial (office/retail/restaurant) listings of no significant concern were noted in the vicinity of the site. JL Maintenance & Construction Co Inc was identified at 1150 Cahuenga Boulevard. Vine Auto Center was identified at 1219 Vine.	See below
1990	Tekeyan Armenian Cultural Association & Ashrag Dickranian Armenian School	Several residential (individual names) and commercial (office/retail/restaurant) listings of no significant concern were noted in the vicinity of the site. Extra Care Auto Detail and Vine Auto Center were identified at 1219 Vine.	See below
2000	Arsha G Dickranian Armenian SC and Tekeyan Armenian Culutual SC	Several residential (individual names) and commercial (office/retail/restaurant) listings of no significant concern were noted in the vicinity of the site. JL Mntc & Constr Co was identified at 1150 Cahuenga Boulevard.	None. The listing was not listed in the EDR regulatory database.

CITY DIRECTORY REVIEW			
YEAR	SUMMARY (ON-SITE)	SUMMARY (OFF-SITE)	CONCERNS
2006	Armenian Sc, Cultural Sc, Arshag, Dickranian, Tekeyan	Several residential (individual names) and commercial (office/retail/restaurant) listings of no significant concern were noted in the vicinity of the site. JL Maintenance Co Inc was identified at 1150 North Cahuenga Boulevard. Construction Co LDS was identified at 1240 North Cahuenga Boulevard.	None. The listings were not listed in the EDR regulatory database.
2008	Arshag Dickranian Armenian School and Tekeyan Cultural Association	Several residential (individual names) and commercial (office/retail/restaurant) listings of no significant concern were noted in the vicinity of the site. Hollywood Pool was identified at 1122 North Cahuenga Boulevard. JL Maintenance Co Inc was identified at 1150 North Cahuenga Boulevard.	None. The listings were not listed in the EDR regulatory database.

The review of historical city directories did not identify RECs. See Section 6.2 for discussion on regulatory listings related to the properties located to the east and northeast (historical dry cleaners and historical auto station), and southwest (historical dry cleaners and historical auto station) of the site.

5.6 Aerial Photography

VERTEX reviewed aerial photographs including the site and adjoining properties. Copies of the aerial photographs are included in Appendix D. A summary of information obtained from the review is provided in the table below.

AERIAL PHOTOGRAPHY REVIEW			
YEAR	SUMMARY (ON-SITE)	SUMMARY (OFF-SITE)	CONCERNS
1928	The site is depicted as developed with dwellings developed along La Mirada Avenue and Lexington Avenue.	The properties in the site's immediate vicinity to the north, south and east are depicted as developed with dwellings and commercial buildings. The adjoining property to the southwest and west beyond Cahuenga Boulevard are depicted as undeveloped/vacant, beyond which are dwellings.	None
1938, 1948	Relatively unchanged.	Relatively unchanged; however, the adjoining property to the east beyond Cahuenga Boulevard is depicted with a large commercial building developed in the center of the lot with a small building to the northwest.	None
1952	Relatively unchanged.	Relatively unchanged; however, the adjoining property to the southwest beyond Cahuenga Boulevard is depicted as developed with a large public pool and two large commercial buildings (Hollywood Recreation Center) to the south.	None

AERIAL PHOTOGRAPHY REVIEW			
YEAR	SUMMARY (ON-SITE)	SUMMARY (OFF-SITE)	CONCERNS
1954	Relatively unchanged.	Relatively unchanged; however, the commercial building on the west adjoining property beyond Cahuenga Boulevard has been removed and the lot is vacant.	None
1964	Relatively unchanged.	Relatively unchanged; however, the dwellings on the corner of Lexington Avenue and Cahuenga Boulevard on the south adjoining property are depicted as removed and developed with a large commercial structure in its present configuration. The west adjoining property beyond Cahuenga Boulevard is depicted as developed with two large commercial buildings developed adjacent to each other in their present configuration.	None
1970, 1977	Relatively unchanged.	Relatively unchanged; however, the east-adjacent property along Lexington Avenue is depicted with the dwellings removed and replaced with a large U-shaped residential complex in its present configuration.	None
1981	The property is depicted with the existing dwellings along Lexington Avenue removed and developed with the west wing of the present day site building.	Relatively unchanged.	None
1989	Relatively unchanged; however several of the dwellings along La Mirada Avenue have been removed.	Relatively unchanged; however, the dwellings on the northwest adjoining property along La Mirada Avenue beyond Cahuenga Boulevard and the existing commercial building have been removed and are depicted as a vacant lot.	None
1994	Relatively unchanged; however, the remaining dwelling on the corner of La Mirada Avenue and Cahuenga Boulevard has been removed.	Relatively unchanged.	None
2002	Relatively unchanged.	Relatively unchanged; however, the northwest adjoining property has been developed with a residential complex behind the existing residential complex along La Mirada Avenue in its present configuration.	None
2005	Relatively unchanged, except that the site is developed with the east wing of the present day site building and the present day recreational courts to the north of the site building.	Relatively unchanged; however, the east-adjacent property is depicted with the remaining dwellings along La Mirada Avenue removed and the land vacant, beyond which, the large commercial structure on the corner of La Mirada Avenue and Vine Avenue is depicted as removed and the land vacant.	None
2009, 2010, 2012	Relatively unchanged.	Relatively unchanged; however, a commercial building and parking lot have been developed on the east adjacent property in their present configuration.	None

The review of historical aerial photographs did not identify specific concerns or RECs.

5.7 Topographic Maps

VERTEX reviewed historical topographic maps including the site and surrounding areas. Copies of the topographic maps are included in Appendix E. A summary of information obtained from the review is provided in the table below.

TOPOGRAPHIC MAP REVIEW			
YEAR	SUMMARY (ON-SITE)	SUMMARY (OFF-SITE)	CONCERNS
1896, 1900, 1901, 1920	Due to the scale of the maps, the exact use and location of the site could not be determined.	Due to the scale of the maps, the exact use and location of surrounding areas could not be determined.	None
1926	The site is depicted with dwellings.	The adjoining properties to the north and south are depicted with dwellings. The adjoining property to the east is developed with dwellings and a church. The adjoining property to the southwest beyond Cahuenga Avenue is depicted as vacant. The adjoining property to the west beyond Cahuenga Boulevard is depicted as vacant, beyond which are dwellings.	None
1953, 1966, 1972, 1981, 1994	The site is depicted to be a built-up area.	Relatively unchanged; however, the adjoining property to the southwest beyond Cahuenga Boulevard is depicted with a large swimming pool and two buildings.	None

The review of historical topographic maps did not identify specific concerns or RECs.

5.8 Sanborn Fire Insurance Maps

VERTEX reviewed historical Sanborn Fire Insurance maps including the site and surrounding areas. Copies of the Sanborn Fire Insurance maps are included in Appendix F. A summary of information obtained from the review is provided in the table below.

SANBORN FIRE INSURANCE MAP REVIEW			
YEAR	SUMMARY (ON-SITE)	SUMMARY (OFF-SITE)	CONCERNS
1919	No coverage for site.	No coverage for surrounding properties.	None
1950	The site is depicted as developed with dwellings.	The east-adjacent property is developed with dwellings, beyond which are a restaurant on the northeast corner and the Hollywood-Vine Methodist Church on the southeast corner. The north and south adjoining properties are depicted with dwellings. The west adjoining property beyond Cahuenga	None

SANBORN FIRE INSURANCE MAP REVIEW

YEAR	SUMMARY (ON-SITE)	SUMMARY (OFF-SITE)	CONCERNS
		Boulevard is depicted with dwellings and the southwest adjoining property is developed with a swimming pool, a recreation center and an auditorium labeled the Hollywood Playground.	
1955	Relatively unchanged.	Relatively unchanged; however, the restaurant that was depicted on the northeast corner of the east adjoining property is now labeled an Auto Sales and Service. A dwelling on the west adjoining property on the corner of Cahuenga Boulevard and Lexington Avenue is depicted as removed and the lot vacant.	See below
1957	Relatively unchanged.	Relatively unchanged; however the vacant lot on the west adjoining property on the corner of Cahuenga Boulevard and Lexington Avenue is depicted with a large residential building. The south adjoining property is depicted with a dwelling removed on the corner of Lexington Avenue and Cahuenga Boulevard and the lot is vacant.	None
1960, 1961, 1962	Relatively unchanged.	Relatively unchanged; however, a parking canopy has been developed on the west adjoining property west-adjacent of the large residential building on the corner of Cahuenga Boulevard and Lexington Avenue. The south adjoining property has been developed with a large residential building on the corner of Lexington Avenue and Cahuenga Boulevard.	None
1966, 1968, 1969, 1970	Relatively unchanged.	Relatively unchanged; however, the east-adjacent property along Lexington Avenue is depicted with the existing dwellings removed and replaced with a large U-shaped residential building.	None

See Section 6.2 for discussion on regulatory listings associated with the property to the east (Auto Sales and Service) of the site.

6.0 REGULATORY RECORDS REVIEW

VERTEX obtained a regulatory database report as specified in Section 12.0. Review of databases and files from federal, state, and local environmental regulatory agencies was used to identify use, generation, storage, treatment, or disposal of hazardous materials and chemicals, or release incidents of such materials that might have impacted the site. The databases discussed in the following sections address ASTM requirements. Additional federal and state databases may have also been reviewed, and if so, are listed in the table below. A copy of the database report is included in Appendix G.

VERTEX's review of these listings assessed the potential for soil, groundwater, and/or soil vapor impacts to the subject site from on-site listings or listings at surrounding facilities, taking into account such factors as the assumed groundwater depth and flow direction, regulatory status, distance from the site, and other information reported by the regulatory database(s) and/or other sources of information.

A summary of the database information is provided in the following table.

REGULATORY DATABASE SUMMARY			
DATABASE	ASTM RADIUS	TARGET PROPERTY	SURROUNDING FACILITIES
National Priorities List (NPL)/Proposed NPL/De-listed NPL	1 Mile	-	0
Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Sites	½ Mile	-	0
CERCLIS No Further Remedial Action Planned (CERC-NFRAP) Sites	½ Mile	-	0
Corrective Action Report (CORRACTS)	1 Mile	-	0
Resource Conservation and Recovery Act Treatment, Storage, and Disposal Facilities (RCRA-TSDF)	½ Mile	-	0
RCRA Hazardous Waste Generators (RCRA-LQG)	¼ Mile	-	1
RCRA Hazardous Waste Generators (RCRA-SQG)	¼ Mile	-	22
RCRA Former Hazardous Waste Generators/No Longer Regulated Sites (RCRA NonGen/NLR)	¼ Mile	-	0

REGULATORY DATABASE SUMMARY

DATABASE	ASTM RADIUS	TARGET PROPERTY	SURROUNDING FACILITIES
Facility Index System (FINDS)	Target Property	1	-

Facility and Manifest Data (HAZNET)	Target Property	1	-
EDR MGP	1 Mile	-	0
EDR US Hist Auto Stat	¼ Mile	-	43
EDR US Hist Cleaners	½ Mile	-	23

The EDR database report includes an orphan summary. This summary identifies facilities that are listed on one of the above-referenced databases or lists but do not include complete or accurate geographic data. Consequently, EDR was unable to map the facilities in relation to the site. VERTEX reviewed the orphan summary prior to inspecting the site and surrounding properties. Orphan properties located within ASTM search distances of the site (if any) were incorporated into VERTEX’s review.

6.1 On-Site Listings

According to the information presented in the regulatory database report, the site is listed on the HAZNET database for disposing unknown waste from the site in 2012. The site is listed on the FINDS database pointing to other sources containing more information related to the above discussed listing. No violations and/or releases were reported at the site and as such, these listings do not represent a concern to the site.

6.2 Off-Site Listings

A review of state and federal regulatory records revealed several facilities within ASTM-specified search radii of the site. Of these facilities, fourteen (14) were located within 500 feet of the site and are discussed in the table below. The remaining database listings are not considered an environmental concern to the site based on distance, regulatory status, and/or apparent groundwater gradient and are not further discussed.

OFF-SITE STATE AND FEDERAL LISTINGS			
FACILITY	DISTANCE AND DIRECTION; GRADIENT	REGULATORY STATUS	CONCERNS
Rucker R B 1201 Cahuenga Boulevard	Southwest-adjacent; Down-gradient	Listed on the EDR US Hist Auto Stat database as Rucker R B in 1942. No releases were reported.	None
1219 Vine Street	174 feet east; Cross-gradient	Listed on the EDR Us Hist Auto Stat database as Vine Auto Center in 1999 and 2001 to 2003. No releases were reported.	None
Samonji Miyo 144 Cahuenga Boulevard	209 feet south; Cross- gradient	Listed on the EDR US Hist Cleaners database as Samonji Miyo in 1937. No releases were reported.	None

OFF-SITE STATE AND FEDERAL LISTINGS			
FACILITY	DISTANCE AND DIRECTION; GRADIENT	REGULATORY STATUS	CONCERNS
Fountain-Vine Plaza 1253 North Vine Street	294 feet northeast; Up-gradient	Listed on the SLIC database as an open cleanup program site.	See below
Brush Mary 1227 Vine Way	311 feet northeast; Up-gradient	Listed on the EDR US Hist Cleaners database as Brush Mary in 1933 and Hing Lung in 1937. No releases were reported.	None
Encore Video Inc 6344 Fountain Avenue	344 feet north; Cross-gradient	Listed on the RCRA-SQG, FINDS and HAZNET databases for being a small quantity generator of hazardous wastes. No violations were reported.	None
Nu Way Cleaners 1229 Vine Wy	372 feet northeast; Up-gradient	Listed on the US Hist Cleaners database as Nu Way Cleaners in 1937 and Hing Lung in 1942. No releases reported.	None
Cohem David 1247 Vine Wy	373 feet northeast; Up-gradient	Listed on the EDR US Hist Cleaners in 1929, 1933 and 1937. No releases were reported.	None
Buel Wesley 1237 Vine Wy	380 feet northeast; Up-gradient	Listed on the EDR US Hist Auto Sta as Buel Wesley in 1933. No releases were reported.	None
Claman Alfd 1265 Vine Way	447 feet northeast; Up-gradient	Listed on the EDR US Hist Auto Stat database as Claman Alfd in 1933. No releases were reported.	None
1149 Cole Avenue	470 feet southwest; Down-gradient	Listed in the EDR US Hist Cleaners database as Captain Carpet Cleaning LLC in 2005. No releases were reported.	None
Liddle F K 1158 Vine Wy	483 feet southeast; Cross-gradient	Listed on the EDR US Hist Auto Stat database as Baumgartner John in 1929, Cantley Tanzola in 1933, Monroe Al Service Inc in 1937 and Liddle F K in 1942. No releases were reported.	None
1123 Vine Street	495 feet southeast; Cross-gradient	Listed in the EDR US Hist Cleaners database as Lambda Laundry in 1999, 2002 to 2003 and 2005.	None
Bingham BT 1156 Vine Way	497 feet southeast; Cross-gradient	Listed on the EDR US Hist Cleaners as Austin Bud in 1937. No releases were reported.	None

Fountain-Vine Plaza (1253 North Vine Street)

Based on records reviewed on RWQCB's GeoTracker website, this property located about 234 feet in a hydraulically upgradient direction to the site is listed as an open cleanup program site on the SLIC database, case #1196. According to the latest monitoring records (April of 2013) reviewed on RWQCB's GeoTracker website, the monitoring well closest to the site, MW-2 (about 370 feet to the northeast of the site), measured PCE at 26.1 µg/L. Based on reviewed records, the concentration of contaminants appears to be on the east side of this property. Although no RECs were identified based on the distance of this property from the site and the ongoing investigations at this property by the identified responsible party, VERTEX cannot rule out the potential for impacts at the site associated with this upgradient property. However, VERTEX notes that shallow soils underlying the site vicinity consist of sandy silts and clays.

The San Francisco Bay RWQCB Groundwater Environmental Screening Level (ESL) for Evaluation of Potential Vapor Intrusion for PCE with fine-coarse mix soils under commercial/ industrial use is 640 µg/L. The ESL for PCE with fine-coarse mix soils under residential use is 63 µg/L. Based on this information, this facility does not appear to pose a potential vapor intrusion issue to the site.

The remaining historical gas stations and dry cleaner facilities referenced above are not considered an environmental concern to the site based on lack of releases, distance, regulatory status, and/or apparent groundwater gradient.

The facilities referenced above are not considered an environmental concern to the site based on distance, regulatory status, and/or apparent groundwater gradient.

6.3 Additional Environmental Record Sources

VERTEX contacted local agencies to request information relevant to the site and vicinity. A summary of the agencies contacted and the information obtained is included in the following table.

LOCAL RESEARCH SUMMARY		
OFFICE	INFORMATION OBTAINED	CONCERNS
Los Angeles County Assessor's Office	VERTEX obtained the assessor card and detailed property information for the site.	None
Los Angeles County Recorder's Office	Deed records. See Section 5.4.	None
City of Los Angeles Fire Department	Response not yet received.	N/A
City of Los Angeles Building Department	Reviewed available building permits.	None
Los Angeles County Department of Public Works	The site is connected to municipal sewer and water. An initial connection date(s) was not available.	
California Regional Water Quality Control Board (RWQCB)	No records for the site.	None

7.0 SITE RECONNAISSANCE

A site visit was conducted by VERTEX representative Manasi Chavan, Assistant Project Manager, on July 14, 2015 between 10:00 a.m. and 12:00 p.m. Mr. Jose Aguilar, on-site Maintenance Personnel, escorted VERTEX during the site visit and answered questions regarding site operations.

During the site visit, the weather was sunny with a temperature of approximately 72° Fahrenheit. The site visit consisted of a walk-through of the site and visual reconnaissance of neighboring properties from curbside. Photographic documentation of the site visit is included in Appendix A.

7.1 Access Restrictions

VERTEX visually and physically observed accessible areas of the site. The interior and exterior of the site building was observed. No limitations imposed by physical obstructions or other limiting conditions were observed.

7.2 Site Observations

Observations of site conditions were made during the site reconnaissance and are summarized in the table below. Issues of concern are discussed in greater detail following the table.

SITE OBSERVATIONS		
DESCRIPTION	REPORTED/ OBSERVED ON-SITE Y/N	COMMENTS
Hazardous Substances and Petroleum Products	Y	Hazardous materials on-site are limited to small quantities of paint and common cleaning/maintenance chemicals located in the janitorial closet and the kitchen. No concerns were noted.
UST(s)	N	Not identified during the site visit.
AST(s)	N	Not identified during the site visit.
Strong, Pungent, or Noxious Odors	N	Not identified during the site visit.
Pools of Liquid	N	Not identified during the site visit.

SITE OBSERVATIONS		
DESCRIPTION	REPORTED/ OBSERVED ON-SITE Y/N	COMMENTS
Drums	N	Not identified during the site visit.
Unidentified Substance Containers	N	Not identified during the site visit.
Polychlorinated Biphenyls (PCB)-containing Equipment	N	A pad-mounted electric transformer was noted along the west site boundary. VERTEX did not observe evidence of leaks or staining on or around the transformer. Based on the date of construction, the transformer is not suspected to contain PCBs.
Utilities (Electricity/ Natural Gas)	Y	Electricity – supplied by Los Angeles County Department of Water & Power. Solar panels are also present on the roof of the east building wing. Natural Gas – supplied by Southern California Gas Company
Hydraulic Equipment	Y	On hydraulic elevator services the east building wing. No evidence of leaks or staining was observed near the elevator equipment.
Water Supply	Y	Water is supplied to the site by the Los Angeles County Department of Water & Power. An initial connection date was not available.
Wells	N	On-site water extraction or groundwater monitoring wells were not identified or reported.
Wastewater	Y	Wastewater discharges from the site are limited to domestic and commercial discharges with no indicated process/industrial type discharges. Sewer service is provided to the site by the County of Los Angeles. An initial connection date was not available.
Septic	N	Not identified during the site visit.
Storm Water	Y	Storm water at the site is collected in storm drains located in the parking areas, which reportedly discharge to the municipal system. No evidence of staining was observed around the storm drains.
Flood Plain	Y	According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), most of the site is located outside the 100- and 500-year flood zones, except for the southeast corner which is located within the 500-year flood zone.
Pits, Ponds, Lagoons	N	Not identified during the site visit.
Stained Soil, Stained Pavement, Corrosion to Pavement	N	Not identified during the site visit.
Stressed Vegetation	N	Not identified during the site visit.
Solid Waste	Y	The site currently maintains one solid waste dumpster that is serviced by Athens Services. Additional waste streams were not identified. The dumpster is located at the entrance to the subterranean parking garage under the east building wing. No evidence of staining was observed in the vicinity of the dumpsters.
Hazardous Waste Management	N	None
Heating/Cooling	Y	The building is heated and cooled by natural gas fired/solar panel powered roof mounted units.

SITE OBSERVATIONS		
DESCRIPTION	REPORTED/ OBSERVED ON-SITE Y/N	COMMENTS
Drains, Sumps, Oil/Water Separators/Sand Traps	Y	Drains were limited to drains in bathrooms and stormwater drains in the parking lot, which discharge to the municipal system. Concerns were not identified.
Vapor Intrusion	N	As part of this assessment, VERTEX assessed the potential for impacts to the site from potential on- and off-site sources of vapor intrusion. The potential for impacts from off-site properties included a review of current off-site operations (see Section 2.4), a review of historical operations (see Section 5.2), and a review of regulatory database records (see Section 6.2). Potential sources of on- and off-site or vapor intrusion were not identified.

8.0 DATA GAPS

Significant data gaps that would affect VERTEX's ability to identify RECs at the site were not encountered during this assessment. Deviations or deletions from the scope of work defined by ASTM E 1527-13 were not intentionally made.

Our conclusions regarding the potential environmental impact of nearby, off-site facilities on the site are based on readily available information from the environmental databases and the assumed groundwater flow direction as inferred from the topography of the site and surrounding area. A detailed file review of each facility was beyond the scope of work. However, VERTEX conducted a limited review of regulatory files at the City and County of Los Angeles offices, and RWQCB's GeoTracker website.

9.0 ADDITIONAL SERVICES

The following additional (non-ASTM) services were performed as part of this assessment.

9.1 Asbestos-Containing Materials (ACMs)

A visual survey of limited building areas was performed to assess major classes of accessible suspect ACMs that may be present. Based on the age of the site building (constructed in 1981 and 2004), it is unlikely that significant quantities of ACMs are present. Suspect ACMs observed included roofing materials, tile flooring, drywall, and ceiling tiles. The materials assessed were observed to be in undamaged physical condition and non-friable, except for the ceiling tile, which is friable, but was in good condition.

9.2 Lead-Based Paint (LBP)

Based on the age of the site building (constructed in 1981 and 2004), it is unlikely that LBP is present within the site building. As such, LBP is not considered a concern to this investigation.

9.3 Radon

Radon (Rn^{222}) is a naturally occurring inert, colorless, odorless radioactive gas derived from the decay of radium (R^{226}). Radium occurs in geologic formations containing uranium, granite, shale, phosphate, or pitchblende and was commercially used in luminescent products. Radium decays into reactive, radioactive daughter particles that attach themselves to other particles such as dust and are a lung cancer risk. Radon can move through permeable rocks and soils and can eventually seep into buildings. The movement of radon into buildings is controlled largely by the soil permeability under a foundation and access to the interior of buildings through openings in the foundation. Radon is heavier than air and is more likely to be present in sub-grade areas (including basements).

The site is located in Los Angeles County, which is identified as a Zone 2 radon area. Areas within Zone 2 have an average indoor radon level that lower than 4 picoCuries per liter (pCi/L), but greater than 2 pCi/L. The U.S. EPA action level for radon is 4 pCi/L. As such, the site is located in an area of moderate radon potential. The site is currently utilized for commercial purposes. As such, radon is not considered a concern at this time.

10.0 CONCLUSIONS AND RECOMMENDATIONS

VERTEX has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, of the Arshag Dickranian Armenian School located at 1200 North Cahuenga Boulevard in Los Angeles, California. Exceptions to, or deletions from, this practice are described in Section 8.0 of this report. This assessment has revealed no evidence of RECs in connection with the site. As such, no additional investigation is recommended at this time.

11.0 SCOPE AND LIMITATIONS

11.1 Purpose

The primary purpose of this assessment is to identify, to the extent feasible pursuant to the processes prescribed in ASTM E 1527-13, RECs in connection with the site. As defined in ASTM E 1527-13, a REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property; (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.” It does not include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A “historical REC” is defined in ASTM E 1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. ASTM E 1527-13 defines the term “controlled REC” as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

In conducting this assessment, VERTEX followed ASTM E 1527-13, as well as the U.S. Environmental Protection Agency’s All Appropriate Inquiries (AAI) Final Rule of November 1, 2005 as amended December 30, 2013. Any exceptions to, or deletions from, this practice are described in Section 8.0 of the report. ASTM defines good commercial and customary practice for conducting an ESA of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation

and Liability Act (CERCLA) (42 U.S.C. 9601) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability. The practice constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. 9601(35)(B).

As part of ASTM E 1527-13, Phase I ESAs must be conducted by or under the supervision of a qualified Environmental Professional. The AAI Final Rule defines an Environmental Professional as someone who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors of the rule. We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.10. We have the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

11.2 Detailed Scope-of-Services

As part of this Phase I ESA, and in accordance with the general provisions of ASTM E 1527-13, VERTEX performed a visual reconnaissance of the site, noted use of adjoining properties, and conducted historical and regulatory records research. The following provides a more detailed description of the scope of services:

- Visual inspection of the site building(s), if present, and grounds to identify potential for on-site petroleum or hazardous material release(s).
- Visual inspection and categorization of the use of abutting and adjoining properties as potential off-site sources of petroleum or hazardous material contamination to the site.

- Review of readily available state and federal regulatory records related to on-site activities and to potential off-site activities to identify sources of petroleum or hazardous material contamination to the site.
- Review of readily available historical information to assess for potential on-site and off-site sources of petroleum or hazardous material contamination to the site.
- Review of readily available local records related to historical site ownership, usage, and development. This includes obtaining information from local environmental authorities to identify complaints, violations, citations, inspections, environmental liens, activity and use limitations (AULs), or institutional and engineering controls related to the site.
- Review of readily available documents and other resources for the site and site vicinity to evaluate current and historical development and renovation activities.
- Visual assessment for suspect Polychlorinated Biphenyl (PCB) containing equipment, e.g., transformers, elevators. Please note, this scope of work does not include an evaluation for or testing of suspect PCBs in building materials such as caulking, mastic/adhesives, oil-based paints, coatings and sealants. Currently, there are no regulatory requirements to test in-place building materials for the presence of PCBs. Although testing is not required for in place materials, owners are required to know the content of the waste streams that they generate and potentially sign waste profiles prior to disposal facility acceptance. Therefore, if renovation or demolition activities are to be conducted at the site that will result in the generation of demolition debris, a contractor and/or waste disposal facility may request certification of knowledge of the waste stream and/or testing to determine if the material(s) contain PCBs for proper handling and disposal purposes. VERTEX can further discuss this issue and/or provide a proposal for testing and analysis for PCBs if requested.

- Visual inspection of the accessible areas of the site and review of readily available public records to assess the presence or absence of the following ASTM E 1527-13 non-scope considerations: ACMs, LBP, and radon.
- Preparation of a Phase I ESA report.

11.3 Significant Assumptions

Information obtained from the Client, the Client's representative, site representatives, individuals interviewed, and prior environmental reports is considered to be accurate unless VERTEX's reasonable inquiries clearly revealed otherwise.

Conditions observed were considered to be representative of areas that were not observed unless otherwise indicated.

The primary direction of groundwater flow is assumed to follow topography, unless otherwise indicated by measurement of the potentiometric surface or other quantifiable data.

VERTEX reviewed reasonably ascertainable public records with respect to past operations and ownership of the site in an attempt to determine past site usage. VERTEX is not a professional title insurance firm and makes no guarantee, express or implied, that the listing reviewed represented a comprehensive delineation of past site ownership or tenancy for legal purposes. The accuracy and completeness of information maintained in public records by public agencies or other entities is assumed to be sufficient for the purposes of this Phase I ESA, and independent verification of its validity is beyond the scope of this investigation.

11.4 Limitations and Exceptions

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. The findings within this ESA utilized information that was practically

reviewable per ASTM Practice E 1527-13, meaning that only relevant data relating to the subject site has been incorporated into the findings, disregarding extraordinary analysis of irrelevant data. The investigation conducted for this ESA was limited to data that were reasonably ascertainable, meaning that the information was publicly available, obtainable within the cost and time constraints under the scope of services for this project, and practically available. VERTEX is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, site inspection, field exploration, and laboratory test data presented in this report.

It should be noted that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and site evaluation. Subsurface conditions were not field investigated as part of this study and may differ from the conditions implied by the surficial observations. Additionally, the passage of time may result in a change in the environmental characteristics at this site and surrounding properties. VERTEX does not warrant against future operations or conditions, or against operations or conditions present of a type or at a location not investigated. VERTEX does not assume responsibility for other environmental issues that may be associated with the subject site.

This study is not intended to assess or otherwise determine if soil contamination, waste emplacement, or groundwater contamination exists. These data are accessible only by sampling of subsurface material and groundwater through the completion of soil borings and the installation of monitoring wells and the chemical analyses of soil and groundwater samples. The scope of work, determined by the client, did not include these activities.

In view of the rapidly changing status of environmental laws, regulations and guidelines, VERTEX cannot be responsible for changes in laws, regulations, or guidelines that occur after the study has been completed and that may affect the subject site.

It must be noted that no investigation can absolutely rule out the existence of hazardous materials at a given site. This assessment has been based upon prior site history and observable

conditions. Existing hazardous materials and contaminants can escape detection using these methods.

Significant data gaps or accessibility limitations that would affect VERTEX's ability to identify RECs at the site are discussed in Section 8.0.

While VERTEX may comment on environmental compliance matters that fall under the scope of this assessment, this study does not constitute a regulatory compliance audit, and does not document compliance with applicable state, federal, or local regulations.

11.5 Special Terms and Conditions

No special Terms and Conditions were agreed upon between the User and the Environmental Professional.

11.6 User Reliance

This report is for the exclusive use of STORE CAPITAL CORPORATION, a Maryland Corporation, and STORE MASTER FUNDING VII, LLC, a Delaware Limited Liability Company, and their Respective Successors and Assigns, and no other party shall have the right to rely on any service provided by VERTEX without prior written consent. Use of this report by any other party shall be at such party's sole risk.

Terms of Use

Ellis Environmental Management, Inc has prepared this bulk sampling report for the exclusive use of:

Stratford School and JLL

Ellis will distribute any information regarding this assessment and report only upon the request of the client. This report is based upon data and information obtained during the site visits performed by Ellis personnel for the property identified herein within the time frames allowed. It is based solely upon the condition of the property on the date of such inspection, supplemented by information and data obtained by Ellis and described herein. Information presented is based on professional interpretation of data available as of the month prior to the date of report. In evaluating the property, Ellis has relied in good faith upon representations and information furnished by individuals and agencies noted in the report with respect to operations and existing property conditions, and the historic uses of the property to the extent that they have not been contradicted by data obtained from other sources. Use of this report indicates acceptance and agreement that Ellis will incur no responsibility or liability for any loss, injury, claim or damage arising directly or indirectly from any use or reliance on this report, regardless of whether claimed loss, injury, claim or damage was caused by the deficiency, misstatements, omissions, misinterpretations, or fraudulent acts of persons interviewed. Ellis has performed this work, made findings, and proposed recommendations described in this report in accordance with generally accepted environmental science practices in effect at the time the work was performed and within the time frames requested by client. Additional information received following issuance of the report may alter initial findings and recommendations. This warranty stands in lieu of all other warranties, expressed or implied. While this report can be used as a guide, it must be understood that it is neither a rejection nor an endorsement of the property, or of the means or methods used in the treatment, storage or disposal of potentially hazardous materials. Changing circumstances in the environment and in the use of the property can alter the conclusions and information contained in the report.

Bulk Sampling for Asbestos
Bulk Sampling for Damaged Lead-Based Paint

1200 N. Cahuenga Blvd.
Los Angeles, CA 90038

Executive Summary

On September 8, 2015, Ellis Environmental Management, Inc. (Ellis) conducted bulk sampling of a two-story school building (currently vacant) at the subject site. The building consists of:

- a. an east wing (constructed in 2004), and
- b. a west wing (constructed in the 1980's).

Sampling and analyses were conducted for the following potential contaminants:

1. **Asbestos in Building Materials.** Asbestos (5%) was identified in roof penetration mastic, west wing. This material was assessed as “non-friable” (unable to be crushed using normal hand pressure), and was in good condition on the date of inspection.
2. **Lead in Painted Surfaces.** Results indicate lead-containing paint present in white roof pipe paint, red window frame paint, and green gate paint on the west wing of the structure.
3. **Lead in Ceramic Tile.** Results indicated elevated concentrations of lead present in red ceramic tiles (Kindergarten Restroom) in the west wing.

Background

Asbestos-containing materials and lead-based paints have been widely used in the construction of public and commercial buildings since the 1930's. Insulation and fireproofing in more than 750,000 buildings in this country contain some quantity of asbestos. Lead paint was widely applied up until circa 1978, when concentrations of lead in paint began to be reduced.

In their normal state, most types of asbestos-containing building materials are unlikely to release airborne fibers. When broken up or disturbed improperly, however, asbestos fibers may become airborne. Inhalation exposures to high levels of asbestos over long periods and/or ingestion of lead-based paint are associated with an increased incidence of cancer, respiratory, liver and other diseases. Any activity that could disturb asbestos materials or lead-based paint should be undertaken with care and in accordance with applicable law.

Methodology

Samples were collected by Ryan Davidson and Max Yourman, EPA course-certified building inspectors employed by Ellis. All samples were collected under the direction of Duane Behrens, CAC #92-0226 and DOHS Cert. #7914.

1. Asbestos Bulk 40CFR Part 763, Subpart F, Appendix A. (AHERA Final Rule). Results expressed in percent of measured area.
2. Lead Paint. Flame AAS SW 846 3050 B/7000B. Results expressed in % by wt.
2. Lead. TTLC (ceramic tile), results expressed in mg/kg.

Inaccessible Areas

Not all walls and carpet could be demolished to gain complete visual access. There is a chance that additional suspect materials (flooring under carpet, pipe insulation in walls, original ceilings above newer hard lids, asbestos-cement piping under the slab, etc.) will be exposed during demolition. During demolition activities, exposed materials not identified in this report should be analyzed for asbestos prior to disturbance.

Results

Refer also to the attached laboratory reports. Asbestos and lead containing materials were identified in the **west wing of the structure only**. Confirmational samples collected from east wing did not reveal any asbestos or lead containing materials.

Asbestos was identified in:

1. Roof penetration mastic – west wing only.

See “Results” Section for additional material descriptions.

No asbestos was identified in:

1. Wallboard/joint compound systems throughout the building.
2. Acoustic ceiling
3. Cove base/cove base mastic – all colors
4. Resilient sheet flooring – all colors
5. 12” x 12” beige vinyl floor tile
6. 12” x 12” white vinyl floor tile
7. 12” x 12” green vinyl floor tile
8. 16” x 16” beige vinyl floor tile
9. 2’ x 2’ ceiling tiles
10. 2’ x 4’ ceiling tiles
11. Rolled-on roofing felts (built-up roofing).
12. Parapet felts.
13. Window putty
14. Exterior stucco

Lead was identified in:

1. Red window paint – west wing
2. White pipe paint – west wing roof
3. Green gate paint – west wing
4. Red ceramic tile – west wing Kindergarten restroom

Recommendations

Asbestos

Asbestos was detected in roof duct mastic on the west wing of the structure (only). Notification to employees and occupants regarding the presence and location of asbestos materials is required under California Health and Safety Code 25914 and 25915. Removal of asbestos materials is

regulated under California Title 8 1529, 29CFR 1926.1101, South Coast Air Quality Management District (SCAQMD) Rule 1403, and others.

NOTE: White patches to roof cores are temporary and are not guaranteed. Ensure that maintenance personnel are advised of roof sample locations and have made permanent repairs.

Lead

1) Paint:

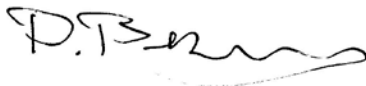

Lead-containing paints listed above do not require abatement unless they will be torched, welded, mechanically abraded or otherwise disturbed by OSHA defined "trigger tasks." (See appendix B). Any peeling or flaking should be stabilized by a license lead-abatement contractor.

2) Ceramic Tile

Lead was identified in red ceramic tile in the west wing Kindergarten restroom. Removal should be performed by lead-certified workers following CAL-OSHA notification, under Cal. Title 8 S1532.1. Drum and profile all waste prior to transport and disposal. When profiling, do not mix potential lead-containing waste with any other materials (e.g. paper suits).

This report is not intended as an endorsement or rejection of the means and methods used in the handling of potentially hazardous materials. Ellis is a privately-held company and is not affiliated with any financial institution or other corporate entity. Ellis is retained as an independent contractor to provide objective, impartial investigatory or analytical service regarding environmentally regulated hazardous or toxic materials. This report is not an endorsement or rejection of any specific methods used in handling or transport of potentially hazardous chemicals. Ellis provides independent testing for indoor air contaminants and other potentially hazardous materials. The company and its employees are certified and licensed to practice in the State of California. Retained laboratories are accredited by the EPA (AREAL), NIOSH (AIHA), and the California Air Resources Board (CARB).

Respectfully,

Duane E. Behrens
President
CAL/OSHA Cert. #92-0226
DOHS Cert. #7914

EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Samples received in good condition unless otherwise noted. Estimated accuracy, precision and uncertainty data available upon request. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Reporting limit is 1%

CLEARANCE NOTICE
24741 Chrisanta Drive, Mission Viejo
Lead

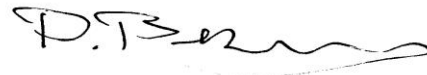

From June 22-23, 2017, Ellis conducted visual inspections, air monitoring, and clearance wipe sampling during and after the removal of appx 500 ft² of lead based ceramic tile from the 2nd floor restrooms of the subject site. Abatement and cleaning efforts, which included wet wiping and HEPA vacuuming of potential lead debris, were performed by Castlerock Environmental, 10040 Painter Ave, Santa Fe Springs, CA 90670, License #776105. The work was monitored by Ellis Environmental Management, Inc., an independent environmental testing/consulting firm located in Rancho Palos Verdes, California. Lead air and wipe samples were analyzed by EPA method 3050B/7000B at LA Testing, an AIHA and NVLAP accredited laboratory located in South Pasadena, California.

Results of air monitoring indicated that, throughout the project, airborne levels of lead dust remained well below the OSHA permissible exposure limit (“PEL”) of 50 µg/m³. Wipe sampling conducted following the work indicated residual surface lead dust to be less than 40 µg/ft². Based on these results, areas listed above were cleared for occupancy by non-protected personnel on June 26th at 14:00.

Date: 06/27/17 Project No. 17-273

Client: JLL/Stratford

Signed:

Duane Behrens, President
CDPH Cert. # 7914 (lead)

This notice is not an endorsement or rejection of any specific methods used in handling or transport of potentially hazardous chemicals. Nor is it intended as a hazardous materials survey of the entire building or facility. Ellis provides independent testing for indoor air contaminants and other potentially hazardous materials. The company and its employees are certified and licensed to practice in the State of California. Employees providing asbestos-related building inspections maintain current certification requirements as issued by California OSHA and the California Department of Health Services. Retained laboratories are accredited by the EPA (AREAL), NIOSH, DOHS, AIHA, NVLAP and CARB.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 22 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are 24 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 40 UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 04/27/2020 has revealed that there are 4 VCP sites within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 12 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that there are 25 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk

EXECUTIVE SUMMARY

Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 12 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 9 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Longitude: -118.32709908
Case Type: Cleanup Program Site
Case Worker: MZ
Local Agency: Not reported
RB Case Number: 1196
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE), Gasoline
Site History: The southwest corner of the intersection of Fountain Ave and Vine Street contained a former dry cleaning facility and a former gasoline station. The RP has not yet complied with Regional Board requirements to conduct additional soil and groundwater investigations in the northeastern portion of the site..

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 01/04/2019. OBSERVATION: Several containers of dry cleaner filters were found outside the rear of the shop and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of dry cleaner filters and submit a copy of the manifest/receipt to the CUPA.

Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General Local Ordinance
Violation Notes: Returned to compliance on 01/04/2019. OBSERVATION: Owner/Operator failed to obtain or maintain an active permit. CORRECTIVE ACTION: Every business or business concern within the jurisdiction of the LACoCUPA and subject to one or more of the program elements shall be required to apply for, pay the permit fees, and obtain from the LACoCUPA a unified program facility permit for the program elements applicable to such facility prior to the commencement of any business or activity related to any of the program elements. The permit required under this section shall be posted and conspicuously displayed at the location falling under the requirements of this chapter. Every person, business, or business concern within the jurisdiction of the LACoCUPA and subject to the requirements of one or more of the program elements shall be required to pay the applicable annual fees and any applicable late payment penalty and apply for and obtain from the LACoCUPA a unified program facility permit for the program elements [Truncated]

Violations Found: Yes

Eval Type: Routine done by local agency

Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by WON YEE KIM. Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to <https://cersbusiness2.calepa.ca.gov> to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Violation Date: 12-02-2015
Citation: HSC 6.11 25404.1 - California Health and Safety Code, Chapter 6.11, Section(s) 25404.1
Violation Description: Failure to obtain and/or maintain an active hazardous waste generator permit.
Violation Notes: Returned to compliance on 12/02/2015. OBSERVATION: The Owner/Operator failed to obtain or no longer has an active hazardous waste generator permit. A CUPA permit has not been obtained. CORRECTIVE ACTION: The Owner/Operator shall immediately apply to receive a new or renewed hazardous waste generator permit and maintain that permit as active as long as the facility is in operation and continues to generate hazardous waste. Every person, business, or business concern within the jurisdiction of the LACoCUPA and subject to the requirements of one or more of the program elements shall be required to pay the applicable annual fees and any applicable late payment penalty and apply for and obtain from the LACoCUPA a unified program facility permit for the program elements applicable to such facility prior to the commencement of any business or activity related to any of the program elements. Upon receipt of full payment from a unified program facility for all the annual fees, including previous unpaid annual [Truncated]

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-27-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: INSPECTOR DAVID TU on site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by NEW OWNER ROBERT KOBRAMAUSIHI. Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the on site hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to <https://cersbusiness2.calepa.ca.gov> to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 04/11/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Failure to test overfill prevention by 10/13/18. CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. Submit verification.

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Returned to compliance on 04/15/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: DO inspections conducted after 9/30/2018 must be every 30 days and in accordance with sections 2716(a)-(e). DO Inspections done on the following dates: 10/13/18 & 11/20/18(38 days), 12/13/18 & 1/13/19(31days), 1/13/19 & 2/13/19(31 days). CORRECTIVE ACTION: Ensure that DO is complying with all the requirements noted above. Submit

Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by MANAGER TONY KARRAA Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained, facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS), missing site map, and emergency response plan. Please go to <https://cersbusiness2.calepa.ca.gov> to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-27-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by MICHAEL FINKELSTEIN - OWNER. Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to <https://cersbusiness2.calepa.ca.gov> to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Lead Agency: LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number: Not reported
Latitude: 34.094661073
Longitude: -118.32638294
Case Type: Cleanup Program Site
Case Worker: CL
Local Agency: Not reported
RB Case Number: 1186
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil, Soil Vapor, Under Investigation
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE), Benzene
Site History: Paragon cleaners is located on the northeast corner of the intersection of Vine Street and Fountain Avenue. Ground water has been impacted by the contaminant PCE due to operations at the dry cleaners. The dry cleaner has been in operation since 1961, and in 2006, switched to "green" chemicals. The site owner has been issued a Cleanup and Abatement Order (CAO) from the state for assessment and cleanup.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 04-27-2016
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 07/18/2019. More recent inspection completed. Newer inspection report and violations supersede previous violations. Previous violations were abated this date
Violation Division: Los Angeles City Fire Department
Violation Program: HMRRP
Violation Source: CERS

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-26-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Consent to enter, inspect and take photographs was given by: Darlene Pav The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into CERS is required between January 1 and March 1 of every year. Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change. As a reminder, you must complete all [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-27-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by Taline Mazlemian. Contact Information: paragoncleaners@hotmail.com Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to <https://cersbusiness2.calepa.ca.gov> to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Eval General Type: Other/Unknown
Eval Date: 04-05-2019
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Second Notice of Violation Inspection Report Documents uploaded to CERS were reviewed. Indicated previously in this report are violations, originally issued on 2/26/19, that have not been resolved by the original COMPLY BY date. These violations have been re-issued and the violation class upgraded. Review and correct all violations indicated in this report, on or before the new COMPLY BY date associated with each violation. Failure to resolve these violations will result in this facility being subject to formal enforcement.
NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into CERS is required between January 1 and March 1 of every year.  Local Agency: Not reported
 RB Case Number: 1224
 File Location: Regional Board
 Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
 Potential Contaminants of Concern: * Chlorinated Hydrocarbons, Tetrachloroethylene (PCE)
 Site History: The Site was occupied by a motion picture post-production facility where titles, visual effects and special effects were applied onto motion picture film. The former Pacific Title and Art Studio (PTAS) was a post-production motion picture facility that operated from approximately 1946 to 2009. Operations in the main building included

internal film developing and associated film cleaning and optical printing to support post-production processes. The main building housed office space, film developing, printing and film cleaning process units, studios and film viewing theaters. The garage-like structure in the southwest portion of the subject property was used for storage of equipment, paints, janitorial chemicals and other materials. In 2009, the Amidi Group acquired ownership of the property from PTAS for re- development of the main building into an executive office complex. The redevelopment was completed in June 2013.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

- . Waste code: D000
- . Waste name: Not Defined

- . Waste code: F001
- . Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F004
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F006
- . Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Click Here:

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months. Returned to compliance on 09/25/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Site failed to test Overfill Prevention Equipment by 10/13/18, tested A/V alarm on 2/19/19. During 9/25/19 annual inspection, no A/V Alarm was found. Site does have FTSO. CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. Submit verification. Anniversary date for next test is 10/2021.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
 Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
 Violation Notes: Returned to compliance on 04/15/2019. "NOT ACCEPTED: Effective December 28, 2017, CalEPA has replaced the previously existing five federal hazard categories in CERS with twenty-four new federal hazard categories. The following federal hazard categories are now obsolete g fire, reactive, pressure release, acute health, chronic health. A review of your submittal has determined that you still have the previous federal categories selected and/or have NOT selected any of the NEW federal hazard categories for your chemical inventory. Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.
Violation Notes: Returned to compliance on 10/18/2018. OBSERVATION: A hazardous waste tank assessment/reassessment has not been conducted for the used oil tank system within 5 years of the previous tank system assessment or within the remaining service life of the tank system as stated in the engineer's report, whichever is less. Observed a 1000 gallon used oil AST at the service area. Service Manager stated they are in the process to get this completed with their consultant. CORRECTIVE ACTION: Obtain a written hazardous waste tank system reassessment for the used oil tank system in accordance with 22 CCR 15 66265.192 and submit a copy to the CUPA via email

Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes: Returned to compliance on 10/08/2018. OBSERVATION: Documented training of personnel was not available at the time of inspection. Manifest indicated monthly pick up of approximately 1000 gallons of used oil. CORRECTIVE ACTION: Locate training documentation or conduct training with applicable personnel and document it. Submit a copy of the training documentation via email to the CUPA by 9/20/2018.

and field verified. The following is a list items that need to be corrected: 1. Update your facility information through CERS for the current year (2018). 2. Submittals are due annually between January 1st and March 1st. NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires business that store, uses or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. To receive a Consolidated Permit you must satisfy the following requirement: **** Annual submission of a hazardous materials business plan to CERS by March 1 of every year. Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change. For new CERS users, please follow the procedures [Truncated]

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: INSPECTOR DAVID TU on site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by GENERAL MANAGER DAVE SLOANE. Observed the facility and inspected hazardous materials storage. Facility has also not electronically disclosed the on site hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to

<https://cersbusiness2.calepa.ca.gov> to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 CERS ID: 10259425
 CERS Description: Hazardous Waste Generator

Violations:

Site ID: 145804
 Site Name: QUIXOTE
 Violation Date: 08-27-2018
 Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
 Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
 Violation Notes: Returned to compliance on 08/29/2018. OBSERVATION: Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. -The following disposal documentation/manifests were not available during time of inspection: used oil, waste anti-freeze, and drained used oil filters. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years and submit copies to the CUPA by 09/26/18.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-27-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Inspection Report Consent to enter, inspect and take photographs was given by: Martin Rodriguez Documents uploaded to CERS were reviewed and field verified. The following is a list items that need to be corrected: 1. Update your facility information through CERS for the current year (2018). 2. CERS submittals are due annually between January 1st and March 1st NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires business that store, uses or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. To receive a Consolidated Permit you must satisfy the following requirement: **** Annual submission of a hazardous materials business plan to CERS by March 1 of every year. Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change. For new CERS users, please follow the [Truncated]

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

sump Box monitored by 208 sensors. Any change of information must be updated in CERS within 30 days of the change. **CORRECTIVE ACTION:** Immediately update the required information in CERS and submit for review by the CUPA.

Violation Division: Los Angeles City Fire Department
Violation Program: UST
Violation Source: CERS

Site ID: 43433
Site Name: LAPD - HOLLYWOOD DIVISION
Violation Date: 02-05-2019
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2

Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Violation Notes: Returned to compliance on 02/05/2019. **OBSERVATION:** Owner/Operator failed to meet one or more of the following spill container requirements: install or maintain spill container which is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill container, and is resistant to galvanic corrosion; did not perform tightness test at installation, every 12 months thereafter, or within 30 days after a repair; did not have tested using manufacturer's guidelines, industry codes, engineering standards, or method approved by PE, or was not tested by a certified UST service technician; or failed to maintain testing records for 36 months. Spill bucket had 10" of liquid (~3 gallons) of liquid, and therefore did not hold 5 gallons. Liquid removed during inspection. **CORRECTIVE ACTION:** Ensure that spill bucket is free of liquid.

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: OBSERVATION: The "Designated Operator Visual Inspection Reports" are missing signatures for months 2/20/19 & 3/21/19. CORRECTIVE ACTION: Complete missing signatures for months 2/20/19 & 3/21/19 and email Inspector a copy of the updated "Designated Operator Inspection Reports."

Violation Notes: install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.
Returned to compliance on 02/08/2018. OBSERVATION: Owner/Operator did not install or maintain spill bucket which is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, or is resistant to galvanic corrosion. There was approximately 1 gallon of water in spill bucket . Water was removed from bucket before testing. CORRECTIVE ACTION: Ensure that the spill bucket is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and is resistant to galvanic corrosion.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-27-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by GIVORK OR VREZH AGADZHANYAN - MANAGER/OWNER. CONTACT INFORMATION: FRIENDLYACL@GMAIL.COM Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to <https://cersbusiness2.calepa.ca.gov> to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Eval Notes: Inspection Report Consent to enter, inspect and take photographs was given by: Guevork Markarian Documents uploaded to CERS were reviewed and field verified. The following is a list items that need to be corrected: 1. Update your facility information through CERS for the current year (2018). 2. Update your hazardous materials inventory per the new Cal EPA reporting requirements. 3. Oxygen and acetylene noted at time of inspection. Add these items to your hazardous materials inventory. NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires business that store, uses or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. To receive a Consolidated Permit you must satisfy the following requirement: **** Annual submission of a hazardous materials business plan to CERS by March 1 of every year. Please remember that any change in inventory [Truncated]

Click Here:

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status Date: 10/30/2015
Global Id: SL0603716222
Lead Agency: LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number: Not reported
Latitude: 34.088565
Longitude: -118.333524
Case Type: Cleanup Program Site
Case Worker: RO
Local Agency: Not reported
RB Case Number: 1131
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Acetone, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: The site, located at the northwest corner of Seward Street and Barton Avenue in Hollywood, was formerly used for film processing activities from 1926 until 2002. The site was occupied by approximately eleven structures (Buildings 1 through 11), parking lots, and an interior courtyard. Film processing and associated activities were conducted in three main buildings; Buildings 1, 2 and 3. The majority of the chemicals that had been used in film processing were stored in the basement of Buildings 2 and 3. Historically, the chemicals used for film processing included isopropyl alcohol, acetone, 1,1,1-Trichloroethane (1,1,1-TCA), Perchloroethylene (PCE), ammonium thiosulfate, and proprietary development solutions. The remaining buildings were used as offices and for other purposes, such as general storage, a maintenance shop, an electrical shop, and for archiving films. Buildings 1 through 11 were demolished between April and August of 2005. The site is presently vacant and awaiting commercial redevelopment.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 12/12/2001
Comments: Approximately 136 cubic yards of soil were removed. Based on confirmation sampling, the estimated mean for surface soil based on 95% UCL was 0.860 mg/kg and for subsurface 1.91 mg/kg. Based on this, residual arsenic levels are below the cleanup goal.

Completed Date: 02/10/2000
Comments: LAUSD MASTER OVERSIGHT AGREEMENT (DOCKET NO. HSA-A 99/00-051)
EXECUTED ON 2/10/00. As part of the Master Oversight Agreement
between DTSC and the Los Angeles Unified School District (LAUSD),
DTSC will provide oversight for a Preliminary Endangerment Assessment
(PEA) for the proposed Central Los Angeles High School No. 1 site
(aka Metromedia)

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 07/02/2002
Comments: DTSC has determined that all appropriate response actions have been
completed, that all acceptable engineering practices were implemented
and that no further removal/remedial action is necessary, specific
only to the removal around the underground storage tank. Additional
sampling will be conducted post- demolition near on-site hydraulic
elevators and residential structures. For Arsenic only. FA for
hydraulic elevators and lead

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: N/A

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/29/2020

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/29/2020	Source: EPA

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/23/2020	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/23/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/25/2020	Telephone: (415) 495-8895
Date Made Active in Reports: 05/21/2020	Last EDR Contact: 06/22/2020

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/23/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/25/2020	Telephone: (415) 495-8895

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/23/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/25/2020	Telephone: (415) 495-8895

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 02/13/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/20/2020	Telephone: 703-603-0695
Date Made Active in Reports: 05/15/2020	Last EDR Contact: 08/24/2020
Number of Days to Update: 85	Next Scheduled EDR Contact: 09/07/2020
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 02/13/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/20/2020	Telephone: 703-603-0695

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/01/2020	Source: Environmental Protection Agency

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 03/18/2020
Date Data Arrived at EDR: 03/19/2020

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

USGS TOPOGRAPHIC MAP

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	1/4 - 1/2 Mile SW	SW
1G	1/4 - 1/2 Mile SW	SW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinator soil types may appear within the general area of target property.

Soil Surface Textures: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Surficial Soil Types: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Shallow Soil Types: fine sandy loam
 gravelly - loam
 sand
 silty clay

Deeper Soil Types: stratified
 clay loam
 silty clay loam
 gravelly - sandy loam
 coarse sand
 sand
 weathered bedrock
 very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Highlights

Over 30 years in environmental industry

Over 30 years conducting Phase I and II Environmental Assessments

Over 20 years conducting subsurface investigations, site assessments & remediation of contaminated sites

Over 30 years conducting these investigations on commercial properties, including: industrial, light industrial, office, hi-rise office, multi-family residential, retail, senior living facilities, warehouses, recreational, gas stations, golf course, vacant/undeveloped land, agricultural land, hospitality, automobile dealerships, self-storage, multi-use, Fannie-Mae, Freddie-Mac, SBA, and HUD.

Experience Summary

Mr. Zook has over 30 years of extensive experience in conducting over 2,000 Phase I and II Environmental Site Assessments of commercial, industrial and multi-family residential properties throughout the western United States for a wide range of clients. He has also managed environmental planning and permit requirements associated with underground storage tank installations, monitoring and removals. Mr. Zook has conducted or overseen hundreds of environmental site assessments and remediation work in accordance with ASTM E1527, the USEPA All Appropriate Inquiry rules, Fannie Mae Delegated Underwriting Standards, Freddie Mac guidelines, HUD guidelines, and other client specific scopes of work. Projects range from single property to multi-site portfolios to large industrial facilities.

In addition, Mr. Zook has managed environmental site assessments, asbestos-related projects and environmental litigation projects. Mr. Zook has directed remedial action projects for soil and groundwater contamination, provided interface with regulatory agencies and provided regulatory compliance with OSHA, Cal-OSHA, RCRA and California Department of Health Services regulations.

For a regional environmental consulting firm, Mr. Zook served as Senior Project Manager, where he performed and managed environmental site assessments and remedial work on various industrial,

commercial, institutional and residential properties. Assessments included limited and comprehensive surveys for asbestos, lead-based paint, lead-in-drinking-water, mold and radon gas emissions. He also managed subsurface investigations to determine the presence of contamination in soil and groundwater, prepared written reports in formats prescribed by various fiduciary institutions and performed peer reviews on environmental site assessments completed by other environmental firms. Mr. Zook also acted as Senior Project Manager for the remediation of soil and groundwater contamination at numerous service stations and other commercial properties throughout southern California for several major oil companies. He was responsible for review of final reports and QA/QC.

Project Experience

Regional Shopping Mall, Irvine, CA. Conducted ASTM-1527 Phase I ESA on a 1,200,000 SF shopping mall on an 87-acre property. Conducted site visit, reviewed onsite paper work, local agency records for permits, violations, and remedial actions. Reviewed historical documents to determine historical usage of subject and adjoining properties. Reviewed governmental database lists for potential onsite and offsite contamination. Concluded no additional work was warranted.

Business Park, Irvine, CA. Conducted ASTM-1527 Phase I ESA on 75-acre business park that consisted of 68 light industrial and office buildings. Conducted site visit, reviewed onsite paper work, local agency records for permits, violations, and remedial actions. Reviewed historical documents to determine historical usage of subject and adjoining properties. Reviewed governmental database lists for potential onsite and offsite contamination. Concluded a Phase II investigation was warranted based on the operations of a metal plating shop and dry cleaners.

Large Multi-Tenant Business Park, Santa Clara, CA. Conducted ASTM-1527 of 50 plus unit light industrial park. Performed a site inspection of current tenants and their hazardous materials and waste handling procedures. Reviewed onsite paper work, local agency records for permits, violations, and remedial actions. Reviewed historical documents to determine historical usage on property. Reviewed governmental database lists for offsite contamination. Concluded no additional work was warranted.

Undeveloped Ranch, Central California, CA. Conducted ASTM-1527 of 13,000-acre ranch. Performed a site inspection of land by foot and vehicle. Reviewed local agency records for permits, violations, and remedial actions. Reviewed historical documents to determine historical usage on property. Reviewed governmental database lists for offsite contamination. Concluded no additional work was warranted.

Retail Building, Newport Beach, CA. Conducted ASTM-1527 Phase I ESA on retail building located within a former oil field. Conducted site visit, reviewed onsite paper work, local agency records for permits, violations, and remedial actions. Reviewed historical documents to determine historical usage of subject and adjoining properties. Reviewed governmental database lists for potential onsite and offsite contamination. Concluded a Phase II investigation was warranted based on the existence of an abandoned oil well and sulfide odors.

Business Park, Irvine, CA. Conducted ASTM-1527 Phase I ESA on 75-acre business park that consisted of 68 light industrial and office buildings. Conducted site visit, reviewed onsite paper work, local agency records for permits, violations, and remedial actions. Reviewed historical documents to determine historical usage of subject and adjoining properties. Reviewed governmental database lists for potential onsite and offsite

contamination. Concluded a Phase II investigation was warranted based on the operations of a metal plating shop and dry cleaners.

Retail Center, Palm Springs, CA. Conducted ASTM-1527 Phase I ESA on eight-acre retail center that consisted of eight buildings and over 30 tenants, including a service station. Conducted site visit, reviewed onsite paper work, local agency records for permits, violations, and remedial actions. Reviewed historical documents to determine historical usage of subject and adjoining properties. Reviewed governmental database lists for potential onsite and offsite contamination. Concluded a Phase II investigation was warranted based on the length of time of the operations of the service station and USTs.

Travis Air Force Base, Fairfield, CA. Conducted an ASTM-1527 a multi-property portfolio for base housing areas, consisting of 690 acres and 2,187 residential units. Performed a site inspection of current tenants and their hazardous materials and waste handling procedures. Reviewed onsite paper work, local agency records for permits, violations, and remedial actions. Reviewed historical documents to determine historical usage on property. Reviewed governmental database lists for offsite contamination. Concluded part of property was on a former munitions testing range and additional work was warranted.

Dry Cleaner, Newport Beach, CA. Conducted several site subsurface investigations on a dry cleaners. Drilled and samples numerous soil borings. Installed several groundwater monitoring wells to determine if the groundwater had been impacted by activities at a dry cleaner and to determine groundwater gradient direction. Collected groundwater samples for chemical analyses for solvents. Also collected water samples by drawing samples with a direct push (Geoprobe) rig. Submitted results to government agency for site closure or additional assessment. Conducted soil vapor and indoor air sampling to determine is soil vapor intrusion was present. Concluded soil and groundwater were impacted and that soil vapor intrusion was a concern. Property was an ongoing project.

Gas Station, Carson, CA. Conducted several site subsurface investigations at an active service station. Drilled, logged, and collected soil samples from soil borings at gas station to delineate gasoline plume in soil. Installed vadose wells for future vacuum extraction system. Interpreted data and prepared report that was submitted to regulatory agency as per directives. Additional soil borings/wells were subsequently drilled/installed and additional soil samples were collected for analyses.

Experience Summary

Mr. Redding serves as a Senior Project Manager for Partner Engineering and Science, Inc. (Partner), overseeing and managing all aspects of multi-scope projects including Phase I ESAs in accordance with EPA's All Appropriate Inquiry (AAI), Property Condition Assessments (PCAs), Zoning Reports, and Seismic Assessments.

Mr. Redding has over sixteen years of project experience in the environmental consulting industry. Mr. Redding is familiar with all aspects of Due Diligence Property Assessments and the needs and requirements of a varied number of reporting standards, including ASTM E1527-13, EPA's All Appropriate Inquiry (AAI), The U.S. Small Business Administration (SBA), and customized client formats and scopes. Mr. Redding has performed and supervised over 1,000 ESAs and customized environmental assessments of a variety of properties including multi-family residential, hospitality, commercial office buildings, shopping centers, multi-tenant commercial complexes, industrial warehouses, manufacturing facilities, dry cleaning plants, gasoline service stations, automotive repair and body shops, medical facilities, food processing facilities, and agricultural properties.

Project Experience

Junior College Campus and Historical Military and Medical Hospital, Modesto, CA. Mr. Redding prepared a Phase I ESA on a junior college campus in Modesto, the site of a historical World War II era military hospital and subsequent State-run hospital. Multiple recognized environmental conditions (RECs) were identified related to current and historical uses including vehicle and facilities maintenance, underground and aboveground fueling facilities, domestic wastewater treatment systems and septic systems, and asbestos and lead-based paint issues.

2,500-Acre Agricultural Property, Maricopa, CA. Mr. Redding prepared a Phase I ESA on a large agricultural property within an active oil and gas production area. Multiple RECs were identified related to oil and gas well development, oil and gas production, subsurface oil and gas pipelines, aboveground fuel storage, and agricultural chemical use, storage, and application.

Printed Circuit Board Manufacturing Facility, Redwood City, CA. Mr. Redding prepared a Phase I ESA on a printed circuit board manufacturing facility. Multiple RECs were identified related to electroplating, etching, silk screening, chemical storage, and hazardous waste generation, storage, and treatment operations.

Joel Redding

10-Site Residential Portfolio, Central CA. Managed a multi-million dollar acquisition project consisting of Phase ESAs of ten, large-acreage, rural agricultural properties throughout Central California for a residential developer. Duties included managing, performing, and reviewing Phase I ESAs.

25-Site Grocery Chain Portfolio, OR and CA. Managed a multi-million dollar rehabilitation financing project consisting of Phase I ESAs of 25 grocery store properties throughout the State of Oregon and Northern California. Duties included managing, performing, and reviewing Phase I ESAs.

50-Site Mobile Home Park Portfolio, MI, OH, IN, and AL. Managed a multi-million dollar acquisition project consisting of 50 mobile home parks in Michigan, Ohio, Indiana, and Alabama. Duties included managing and reviewing Phase I ESAs.

Highlights

25+ years of experience in Real Estate Due Diligence/Consulting and Site Development Engineering

Prepared over 10,000 Phase I Environmental Site Assessments

Managed over 30,000 Phase I Environmental Site Assessments

Managed over 1,000 Phase II Subsurface Soil/Groundwater and Soil Gas Investigations, Asbestos, Lead, and Radon Screenings

Managed Class-A Equity Property Condition Assessments with Specialized Inspections, Seismic Evaluations, ALTA Surveys, Zoning, ADA Surveys and Pest Inspections

Managed Several Civil Engineering/Geotechnical Investigations of Commercial Development Projects, Construction Doc and Cost Reviews, Construction Progress Monitoring, and Energy Benchmarking

Experience Summary

Mr. Taylor is a Principal and National Client Manager with extensive experience in commercial real estate due diligence and site development engineering throughout the United States. His responsibilities include full-phase site development and environmental consulting, national client management, multi-scope contract negotiation/execution, portfolio project management, and technical report quality control. Mr. Taylor's regional and national expertise compliments the wide variety of Partner projects and client types including national and local lending institutions, asset management/investment groups, commercial/retail developers, and commercial real estate professionals.

Mr. Taylor has 25 years of experience in national commercial real estate due diligence consulting including Phase I Environmental Site Assessments, Phase II Subsurface Soil/Soil Gas Investigations, Property Condition Assessments, Seismic Evaluations, Asbestos, Lead-Paint, and Radon Surveys, ALTA Surveys, Geotechnical Investigations, Civil Engineering, MEP Special Inspections, Energy Evaluations, and Construction Monitoring.

Mr. Taylor has assessed/managed over 30,000 commercial real estate transactions throughout his professional career including several multi-million dollar asset portfolios consisting of a 29-site commercial office property acquisition, two 1,200-site cellular tower transactions, a 215-site regional shopping center vacancy evaluation, a 25-site regional grocery-store chain environmental/survey evaluation, a 16-site multi-family apartment building acquisition, a 10-site residential development acquisition, and 5-site Class A multi-specialized-scope building acquisition inspection. These transactions have included some or all of Partner's core engineering due diligence services described above. Mr. Taylor routinely manages national asset/developer clients to evaluate the environmental and structural risks associated with commercial/industrial properties prior to acquisition. These risks may be associated with past hazardous materials use (i.e., gasoline stations, dry cleaners) which require historical research combined with subsurface evaluations to assess for contamination that could devalue the property or create a human health concern to occupants or construction workers; evaluate for asbestos, lead-based paint, and radon to

determine the need for abatement or venting systems; evaluate the structural integrity of the building and assess for seismic retrofit; evaluate the roof, mechanical, electrical, plumbing systems (i.e., elevators, HVAC systems, sewer); evaluate for American Disabilities Act (ADA) deficiencies (i.e., ramps, railings, access); survey the property boundaries (i.e., ALTA Surveys); evaluate the subsurface conditions for construction suitability (i.e., Geotechnical Investigations); Civil Engineering/Design, and energy studies of the site building to meet with current requirements and systems efficiencies.

Project Experience

National Quick-Serve Restaurant Chains. Multiple National Quick-Serve Restaurant (QSR) Chain development projects which include Phase I Environmental Site Assessments, Asbestos Surveys, Geotechnical Investigations, ALTA Surveys, Plat Map Survey, and Special Inspections. Mr. Taylor manages the projects with attention to client needs/timelines and fieldwork/production in order to advocate the commercial development projects and maintain report efficiencies and construction budgets. These projects require multiple scope management and coordination with clients, technical staff, subcontractors, regulatory agencies, and construction design/contractor entities. Mr. Taylor's due diligence engineering experience as well as Partner's responsiveness and expertise in national commercial real estate development engineering create successful developments and client satisfaction on an ongoing basis.

National Dental Office Chain. Multiple ground-up dental office development projects which include Phase I Environmental Site Assessments, Geotechnical Investigations, and ALTA Surveys. Mr. Taylor manages the projects with attention to client needs/timelines and fieldwork/production in order to advocate the commercial development projects and maintain report efficiencies and construction budgets. These projects require multiple scope management and coordination with clients, technical staff, subcontractors, regulatory agencies, and construction design/contractor entities. Mr. Taylor's due diligence engineering experience as well as Partner's responsiveness and expertise in national commercial real estate development engineering create successful developments and client satisfaction on an ongoing basis.

Regional Gas Station/Convenience Store Chain. Multiple ground-up gas station/convenience store redevelopment projects in California which include Phase I Environmental Site Assessments, Phase II Subsurface Investigations/Characterization, Remedial Cost Estimates with Voluntary Cleanup Regulatory Programs, Asbestos Surveys, and Geotechnical Investigations. Mr. Taylor manages the projects with attention to client/agency interaction and fieldwork/production in order to advocate the commercial development projects and maintain report efficiencies and construction budgets. These projects require multiple scope management and coordination with clients, technical staff, subcontractors, regulatory agencies, and construction design/contractor entities. Mr. Taylor's due diligence engineering experience as well as Partner's responsiveness and expertise with commercial real estate development engineering create successful developments and client satisfaction on an ongoing basis.

Beverly Hills Country Club Renovation, Beverly Hills, CA. A \$12 million-dollar renovation project which included a Phase I Environmental Site Assessment, Property Condition Assessment, Seismic Evaluation, ADA Survey, ALTA Survey and a comprehensive roof assessment. Multiple engineering professionals were coordinated and dispatched to the project site to complete due diligence assessments and cost studies associated with the planned renovation of the historic facility. The renovation was successful and exemplified Mr. Taylor's due diligence engineering experience as well as Partner's responsiveness and expertise in commercial real estate evaluation.

Commercial Office Portfolio, Philadelphia, PA. A \$186 million dollar acquisition project consisting of 29, multi-story commercial office buildings and included Phase I Environmental Site Assessments and Property Condition Assessments with special inspections of HVAC systems, elevators, and roofing systems. Multiple inspectors were coordinated and dispatched to each site within a two-week report completion timeline. Special inspection findings and related repair costs were cross-calculated with generalist inspection reporting and incorporated into the Property Condition Assessment spreadsheets for client/lender review. The acquisition was successful and exemplified Mr. Taylor's project management and negotiation skills, coordination of several in-house engineering professionals and subcontracted elevator consultants as well as Partner's responsiveness and expertise of client/lender's expedited timeline.

National Cellular Tower Portfolios. Two multi-million dollar acquisition projects consisting of over 2,400 cellular towers located throughout the United States which included Phase I Environmental Site Assessments. Multiple national inspectors were dispatched to each mountain-top tower within each state. The inspections incorporated the use of guides and four-wheel drive vehicles (primarily Jeeps) to visually inspect each tower. The acquisition project was successful and exemplified Mr. Taylor's project management skills, coordination of dozens of national inspectors, quality control reviews, and responsiveness to client's timeline.

Grocery Chain Portfolio, various locations throughout OR. A multi-million-dollar rehabilitation financing project consisting of 25 grocery store properties included Phase I Environmental Site Assessments and ALTA Surveys. Multiple inspectors were dispatched to each site within a two-week turnaround. The financing project was successful and the project exemplified Mr. Taylor's negotiation/client management skills, coordination of inspections, quality control and completion of timely reports as well as the responsiveness and professional acumen of Partner's Engineering Team.

INITIAL STUDY

APPENDIX H.2: VAPOR INTRUSION ASSESSMENT REPORT

October 12, 2022

Mr. Collin Monsour
BARDAS Investment Group
cmonsour@bardasig.com

**Subject: Vapor Intrusion Assessment Report
1200 Cahuenga Boulevard
Los Angeles, California**

Mr. Monsour:

This *Vapor Intrusion Assessment Report* (Report) has been prepared by RMD Environmental Solutions, Inc. (RMD) for the property located at 1200 Cahuenga Boulevard in Los Angeles, California (the Project Site; Figures 1 and 2). This Report documents results of a vapor intrusion assessment completed by RMD in March 2021. The vapor intrusion assessment was conducted in response to recommendations presented in a Phase I Environmental Site Assessment (Phase I), completed by Partner Engineering and Science, Inc., dated September 24, 2020

The Phase I findings identified a recognized environmental condition (REC) associated with the Project Site based on the presence of a tetrachloroethene (PCE) release from the hydrologically upgradient Paragon Cleaners property located at 1310 Vine Street (Paragon Cleaners). Paragon Cleaners is under Los Angeles Regional Water Quality Control Board (LARWQCB) Oversight, case SL0603766574 (https://geotracker.waterboards.ca.gov/profile_report?global_id=SL0603766574). As reported in the Phase I, groundwater underlying the Project Site has been impacted by migration PCE in groundwater, originating from releases associated with upgradient Paragon Cleaners. During the Third Quarter 2020 monitoring at the Paragon Cleaners, depth to groundwater north of the Project Site along La Mirada Avenue was measured between approximately 24 and 26 feet below the top of the casing¹. Based on groundwater elevations, the groundwater gradient is towards the southwest. Concentrations of PCE detected in groundwater in September 2020 in the vicinity of the Project Site are shown on Figure 2. Concentrations of PCE detected in soil vapor samples collected at 5 feet below ground surface (bgs) in December 2016² in the vicinity of the Project Site are also shown on Figure 2. The soil vapor concentrations upgradient from the Project Site along La Mirada Avenue

¹ Murex Environmental, Inc., 2020. Third Quarter 2020, Groundwater Monitoring Report, Paragon Cleaners, 1310 Vine Street, Los Angeles, California. October 1.

² Murex Environmental, Inc., 2017. Additional Soil Vapor and Groundwater Characterization Report, Paragon Cleaners, 1310 Vine Street, Los Angeles, California. March 1.

exceed the current soil vapor criteria for commercial use. These elevated PCE concentrations in groundwater and soil vapor in the vicinity of the Project Site are being remediated and monitored under a Cleanup and Abatement Order issued by LARWQCB addressed to Ms. Varty Mazlemian as the discharger and the identified responsible party associated with contaminant releases at Paragon Cleaners.

The Project Site is currently developed as a private school complex, which is no longer operating. BARDAS Investment Group (BARDAS) is redeveloping the property. The proposed project (Project) includes reusing a portion of one existing building as commercial and constructing two new commercial buildings, summarized as follows:

- Building A will be a new structure constructed along the northern border of the Project Site, including the area where a structure containing recreational fields over a subterranean garage is currently located. The building footprint will include one level of subterranean garage, one level of at grade parking, and three stories of office space above. The at grade parking garage at Building A will be constructed as an open air garage and not a fully enclosed space.
- Building B consists of a portion of the existing two story building located on the east and southeast portion of the Project Site. The existing subterranean garage beneath the building would remain in place and continue to be used as part of the new development. The occupied space above the garage will be used as office space. The subterranean garage for Building B will be connected with Building A's subterranean garage.
- The existing building located on the southwest portion of the Project Site will be demolished and will be replaced with Building C. The majority of Building C will include one level of an at grade parking garage with three levels of office space above. The at grade parking garage at Building C will be constructed as an open air garage and not a fully enclosed space. Building C also includes an 1,887 square foot area with retail and office space constructed at grade that is outside of the parking garage footprint.

SCOPE OF WORK

To assess the potential for intrusion of PCE into the existing on-Site buildings and subterranean garage, a total of eight subslab Vapor Pins[®] were installed and subsequently sampled on March 4, 2021. Laboratory analytical data was compared to applicable screening levels published by Department of Toxic Substance Control (DTSC) and United States Environmental Protection Agency (USEPA). As further detailed below, based on the findings of the subslab vapor investigation, seven indoor air samples and two ambient air samples were collected on March 27, 2021.

Sampling locations are shown on Figure 2.

Further details are provided as follows.

PRE-FIELD ACTIVITIES

Prior to initiating field work, RMD performed the following pre-field activities:

- Marked the proposed sampling locations for Underground Service Alert (USA);
- Updated the Site-specific Health and Safety Plan (HASP) with task-specific job safety analysis (JSA) forms; and,
- Conducted an underground utility survey to clear the proposed drilling locations of underground utilities and other possible subsurface obstructions.

SUBSLAB VAPOR PIN® INSTALLATION

On March 3, 2021, eight subslab vapor sampling points (SS-1 through SS-8) were installed throughout the Site as shown in Figure 2. Points SS-1 through SS-4 were installed beneath the slab at grade and points SS-5 and SS-6 were installed beneath the subterranean garage slab, situated approximately 4 feet below grade. Points SS-7 and SS-8 were installed beneath the subterranean garage slab, situated approximately 8 feet below grade. The Vapor Pins® were installed by Millennium Environmental, Inc. (MEI), a C-57 licensed contractor, under the oversight of RMD personnel. At each subslab vapor sampling location, a hand-held rotary-hammer was used to drill a 1½-inch diameter pilot hole in the concrete slab, then a 5/8-inch diameter hole was drilled through the entire thickness of the concrete slab using a drill guide, exposing the underlying fill material. A silicone sleeve, which forms a seal against the concrete slab, was placed around each stainless-steel Vapor Pin® before tapping the pin into place using a dead blow hammer. A flush-mounted cap was installed to cover each Vapor Pin®.

SUBSLAB SAMPLING

The subslab vapor points were sampled on March 4, 2021. Each sample was collected in accordance with the DTSC *Final Vapor Mitigation Advisory* (DTSC Advisory)³. At each sampling point a shut-in test was conducted and a total of three system volumes were removed prior to sampling. After the sampling assembly was purged and immediately before the sample was collected, a leak check compound (LCC), 1,1-difluoroethane (1,1-DFA), was used to saturate a paper towel that was placed in a sealable plastic bag near all locations where ambient air could enter the sampling system or where cross contamination could occur. Subslab samples were collected from each location in 1-liter SUMMA™ canisters, labeled, handled under standard chain-of-custody (COC) protocols, and transported to Pace Analytical (Pace) for analysis. The samples were analyzed for volatile organic compounds (VOCs) using USEPA Method TO-15. Field data sheets are provided in Attachment A.

³ DTSC, 2011. *Vapor Intrusion Mitigation Advisory*. October.

BUILDING SURVEY

On March 27, 2021, RMD personnel completed a building survey in preparation for indoor air sampling. The survey was conducted in accordance with the DTSC Advisory and the *Vapor Intrusion Guidance* (DTSC Guidance)⁴. The western portion of the Site has a two-story above-ground building. The eastern portion of the Site is developed with a two-story above-ground building with a subterranean garage. The buildings consist classrooms, bathrooms, and offices typical of a school. The subterranean garage is open to ambient air with two automobile entrances and 10 openings in the walls letting in ambient air. No PCE use or storage was observed on the property. A copy of the building survey is included in Attachment B.

INDOOR AND AMBIENT AIR SAMPLING

On March 27, 2021 RMD collected seven indoor air samples and two ambient air samples. Three indoor air samples were collected within classrooms on the first floor of the western portion of the Site. Four indoor air samples were collected from the subterranean garage on the eastern portion of the Site. Approximate sample locations are presented on Figure 2 and photographs documenting locations of the sample cannisters are provided in Attachment C. At the start of the building survey, no wind was measured March 27, 2021 at weather station KCALOSAN7125 as recorded in Attachment B. The average wind direction listed at the weather station on the morning of March 27, 2021 was northeast, which was used for conducting the ambient air sampling. Samples were collected in accordance with the DTSC Advisory and Guidance.

The indoor air samples were collected from the breathing zone at approximately 3 to 5 feet above the floor. Two ambient air samples were collected to assess outdoor air quality, which could influence and contribute to the air quality within the buildings. The ambient air sample locations were selected based on the findings of the building surveys and the prevailing wind direction. The ambient air samples were located approximately 6 feet above ground surface.

Indoor and ambient air samples were collected over an approximate 8-hour period. The samples were collected in lab-certified 6-liter SUMMA® canisters with lab-calibrated flow controllers (with particulate filters) and vacuum gauges. Upon completion of the approximate 8-hour sampling interval, sample canisters were prepared for submittal to Enthalpy Analytical (Enthalpy) under standard COC protocols. The air samples were analyzed for VOCs using USEPA Method TO-15 in selective ion mode (SIM).

⁴ DTSC, 2011. *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance)*. October.

⁵ <https://www.wunderground.com/weather/us/ca/los-angeles/KCALOSAN712>

The building windows were closed during the sampling period and the heating, ventilation, and air conditioning (HVAC) system was not in operation during the sampling period.

Field data sheets are provided in Attachment A.

INVESTIGATION RESULTS

A summary of investigation results is provided as follows.

SUBSLAB

Table 1 summarizes the subslab analytical results. VOC constituents were compared to the DTSC Screening Levels (DTSC SLs)⁶ and USEPA Regional Screening Levels Regional Screening Levels (USEPA RSLs)⁷ based on commercial land use. The more conservative of the two values for each chemical is designated as the screening level (SL).

All reported soil vapor concentrations were below the SLs with the following exception:

- PCE was reported above the Commercial/Industrial SL of 67micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) in all but one of the subslab samples at concentrations up to 28,200 $\mu\text{g}/\text{m}^3$. Figure 2 summarizes the analytical results for PCE. Concentrations from deeper subslab points installed beneath the parking garage were significantly higher than concentrations collected from the shallower points. This is expected as volatilization of PCE from groundwater vertically attenuates with distance from the groundwater table.

1,1-DFA was used as a LCC for collection of the soil vapor samples for analysis of VOCs by USEPA Method TO-15. As shown in Table 1, 1,1-DFA was detected at concentrations of 2,530 $\mu\text{g}/\text{m}^3$ and 786 $\mu\text{g}/\text{m}^3$ in samples SS-1 and SS-6, respectively. The DTSC Advisory allows the concentration of the LCC at 10 times the reporting limit of the target analyte, which is 1.36 $\mu\text{g}/\text{m}^3$ for PCE corresponding to an allowable 1,1-DFA concentration of 13.6 $\mu\text{g}/\text{m}^3$. The values exceed the allowable concentration and indicate potential dilution from atmospheric air during sampling. The results from SS-1 and SS-6 are considered biased low. However, these results do not change RMD's overall conclusions, discussed below.

The laboratory analytical report is included in Attachment D.

INDOOR AND AMBIENT AIR

Table 2 summarizes the indoor and ambient air analytical results. VOC constituents were compared to the Commercial/Industrial SLs.

⁶ DTSC. 2020. Human Health Risk Assessment (HHRA) Note Number 3, DTSC-modified Screening Levels (DTSC SLs). Human and Ecological Risk Office (HERO). June.

⁷ USEPA. 2020. Regional Screening Levels (TR=1E-06, HQ=1). May.

All reported soil vapor concentrations were below the SLs with the following exceptions:

- PCE was reported above the Commercial/Industrial SL of 2.0 ug/m³ in IA-1 (4.5 µg/m³) and IA-2 (3.3 µg/m³), as shown in Figure 2. These two locations were collected from inside of the building.
- Other VOCs (benzene, chloroform, methylene chloride, and naphthalene) were reported above their respective commercial SLs in at least one indoor sample collected. Concentrations of these chemicals are not present at significant concentrations in subslab samples and are a result of ambient, background concentrations and/or use of on-Site chemical use, such as cleaning products.

The laboratory analytical report is included in Attachment D.

DISCUSSION OF KEY RESULTS AND RECOMMENDED MITIGATION MEASURES

Subslab vapor concentrations of PCE exceed the commercial vapor intrusion SLs due to migration of PCE-impacted groundwater from an off-site upgradient source. These subsurface concentrations result in an exceedance of PCE above Commercial/Industrial SLs beneath the current building at grade located on the southwestern portion of the Site. Air concentrations in the subterranean garage located on the eastern and northern portions of the Site do not exceed PCE SLs, likely due to the open air nature of the garage which allows diffusion of PCE.

BARDAS contracted with GeoKinetics to design a vapor intrusion mitigation system (VIMS) considering the elevated concentrations of PCE in soil vapor. A copy of the GeoKinetics letter, dated October 4, 2022 and summarizing the conceptual VIMS design, is provided as Attachment E. As summarized in the letter the following vapor intrusion mitigation measures have been incorporated into and made a part of the Project:

- MM-1: Building A shall install a vapor barrier that includes a subslab collection and ventilation system along the base and walls of the enclosed subterranean parking garage to reduce the risk values below the DTSC risk management criteria for commercial uses.
- MM-2: Building B shall install a vapor barrier that includes a subslab collection and ventilation system along the base of the enclosed subterranean parking garage. The existing waterproofing system installed for the walls of the subterranean garage are expected to provide adequate protection from vapor intrusion. Upon completion of the Building B vapor barrier, testing shall be conducted to confirm that risk values are below the DTSC risk management criteria for commercial uses, and results shall be evaluated by a qualified environmental professional experienced in VIMS design and interpretation. If required based on results of the test, additional measures to protect against vapor intrusion shall be installed

and additional testing shall be conducted until the risk values have been reduced to below the DTSC risk management criteria for commercial uses. Such additional measures may include, for example:

- Applying epoxy coating to the walls;
 - Providing an increase to indoor air exchange rates within the garage; or
 - Converting the passive vent system to active ventilation (subsurface depressurization).
- MM-3: Building C shall install a vapor barrier that includes a subslab collection and ventilation system beneath the 1,887 square feet of retail and office space constructed at grade to reduce the risk values below the DTSC risk management criteria for commercial uses.
 - MM-4: Building C stairwells and elevators going from the at grade parking garage into overlying spaces shall install localized mitigation, pursuant to standard practice, to reduce the risk values below the DTSC risk management criteria for commercial uses. As detailed in the attached Geokinetics letter, vapor barriers will be installed beneath stairwells and elevators extending into overlying enclosed spaces with the exception of the stairwell between gridlines C9-C11 & CM. This stairwell is shown to be located entirely on a structural footing.

CLOSING

If you have any questions or comments, please do not hesitate to contact Ms. Kirsten Duey at (925) 683-8177 or kduey@rmdes.net.

Sincerely,

RMD ENVIRONMENTAL SOLUTIONS, INC.

Kirsten Duey
Principal Engineer
